RECEIVING MICA CAPACITORS — (Continued)

DIPPED, SILVERED MICA CAPACITORS
TYPES ADM-15, ADM-19, ADM-20 and ADM-30

Aerovox plastic-coated dipped-mica units exceed many of the advantages of molded mica units, and at the same time are smaller than conventional units. Meeting all the applicable MIL-C-5B Test Standards for molded mica capacitors, these unique dipped-mica units offer the following features:

• High operating temperatures —55° to +125°C • Excellent long-life characteristics • Improved temperature coefficient range • Radial leads for automatic insertion and plug-in assemblies • Ideal for printed-wiring assemblies • Unsurpassed performance and stability characteristics • Smaller physical size.

Humidity Resistance: these capacitors shall have an insulation resistance of not less than 2,000 megohms after being subjected to the Humidity Resistance Test as outlined in MIL-C-5B. Minimum Insulation Resistance: 25,000 megohms at 25°C; 1000 meghoms at 125°C.

Capacitors will be marked with capacity and tolerance.

For full technical information request Bulletin NPJ-104.

CHARACTERISTICS

ADM-15—from 5 to 20 mmf. Characteristic "C", from 22 to 150 mmf. Characteristic "E", from 160 mmf. and up Characteristic "F"
ADM-19—All capacities listed "F" Characteristic.
ADM-20—All capacities listed "F" Characteristic.
ADM-30—All capacities listed "F" Characteristic.

Standard Tolerance ±5%

Minimum tolerance for capacitances up to and including 10 mmf. is ± ½ mmf., for all other capacitances ± 1% or 1 mmf. whichever is greater.

AEROVOX DECADE BOXES

RESISTANCE CAPACITANCE INDUCTANCE

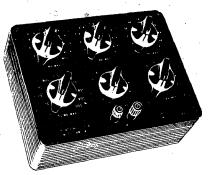

FIGURE B

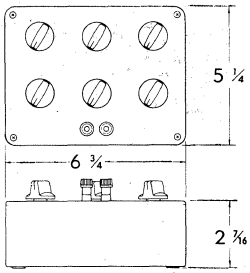

Aerovox now makes available to the electronic industry laboratory quality standards in capacitance, resistance and inductance decades. From one of the outstanding manufacturers of precision resistors, capacitors and inductors, Aerovox is making available decade boxes of the highest quality in the ranges most needed for electronic and electrical laboratories at a price far below that of equivalent quality standards. Aerovox decade boxes are available in 11 units; 4 resistance decades, 3 capacitance decades and 4 inductance decades.

Ten of the decades are housed in seamless, drawn steel cases coated with gray enamel. They are capable of taking the beating of bench use without impairment of accuracy. The 11th decade box, a new resistance model ARD-41, is housed in a special high impact plastic case which will also withstand rugged handling.

This new decade box has a range of 0 to 1.1 megohms in 1 ohm steps, combining all the three other resistance decades into one compact box. Outline drawings of both sizes are shown. All panels are black with the marking engraved in white.

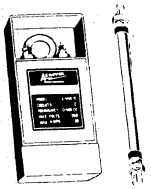
FILTERS

SCREEN ROOM FILTERS



Screen room filters comply with rigid specifications set up by the designers of the most advanced type screen rooms. All have attenuation equal to or exceeding that of the screen room. Easy mounting arrangements plus high attenuation assure you of the finest equipment specially designed for screen room use. These filters are hermetically sealed and terminals at both ends are shielded using knock-outs for ¾" and 1" conduit.

1¼" diameter mounting hole on all cases is countersunk to permit flush mounting of the filter on the screen room.

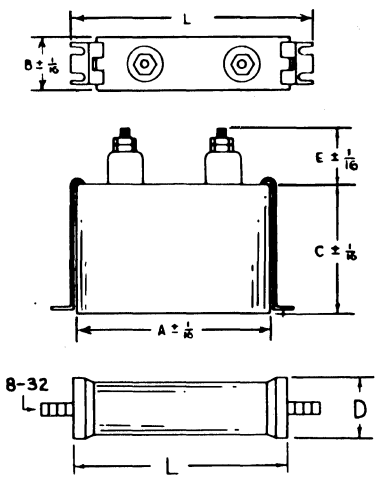
HIGH VOLTAGE FILTER CAPACITORS

SMALLEST SIZE AVAILABLE ANYWHERE

TYPE ASG and TYPE KMOC capacitors are hermetically sealed, rated for operation at 85°C at full nameplate rating, and will withstand most environmental and electrical specifications in general use. Size is very small due to the nature of the dielectric used, and the particular attention to processing. **AVAILABLE UP TO 100 KV**



All glass containers with "D" dimensions of 19/32 have 2½ inch long 18 tinned copper pigtail leads. CONTAINER is a hard glass pillar with silver fused to each end. A metal ferrule is soldered to each end assuring hermetic sealing. The stud is silver soldered to the ferrule. All parts are tin plated.

PULSE FORMING NETWORKS PULSE CAPACITORS

PULSE CAPACITORS and PULSE FORMING NETWORKS require special consideration. Due to the sharp wave front of the pulse it is necessary to reduce the Corona effect to as close to zero as possible. With no internal Corona, and the use of low power factor dielectric material, the pulse current and the repetition rate can be raised to very high figures since relatively little internal heat will be generated. CPC pulse capacitors and pulse forming networks are generally the smallest available.

TYPE LSG and TYPE TSG CAPACITORS are designed for pulse and high radio frequency applications. They are enclosed in hard, chemically neutral, glass with soldered end ferrules. The studs are ⅜" x 8-32 thread. The end ferrules are tin plated. The operating limits are a REP rate of 2000 PPS working into a 50 ohm load on the equivalent Kva at rated pulse charge voltage. The windings are the extended foil type.

TYPE TSG 125° OPERATING

TYPE TSG Capacitors use Teflon as the solid dielectric. The liquid dielectric is silicone fluid. This item may be modified for operation up to 210°C if required. Type TSG available from 1,000 volts to 60,000 volt pulse and .0004 capacitance to .01 capacitance.

TYPE LSG 65° OPERATING

Available from 1,000 volt pulse to 60,000 volt pulse. Capacitance .000075 to .1

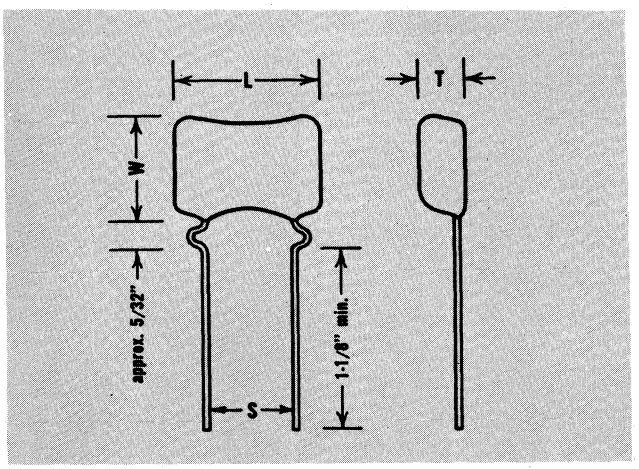
All Dur-Mica capacitor leads are tinned brass except the following which are copper-clad steel, 30% minimum conductivity:

DM-10, DM-42, and DM-43.
DM-19 and DM-20 — 3000 mmf. and above.
DM-30 — 10,000 mmf. and above.

Crimped Leads

In addition to the straight lead design, DM capacitors are also available with crimped leads for printed circuit application. The crimp provides a positive stop when capacitors are mounted. This prevents interference of resin coat on the leads with dip-solder operation, provides greater mounting uniformity, and elevates the components slightly above the surface of the board. The crimp lead design is not a regularly stocked item, but it is available to special order at a small fixed handling charge.



Lead wire gage for crimped lead units is the same as for straight lead capacitors with the exception of DM-15 and DM-16. Crimped lead gage of DM-15 and DM-16 is #20. The DM-10 case size is not available with crimped leads.

Maximum Dimensions

The following is a tabulation of maximum dimensions of the various DM case sizes. They have been specified to anticipate variations in coat thickness and minor protrusions on the surface. As a result, average dimensions of a given lot may be appreciably smaller than those listed.

It is to be noted that the leads are not centered in the thickness dimension as can be seen on the end view dimensional drawing. Construction of Elmenco Dur-Mica capacitors provides for leads to project from one surface of the mica stack, causing them in turn to extend from one edge of the capacitor. Regardless of case size and overall thickness, leads will always be within 1/16 to 3/32 from one of the capacitor surfaces. (Exclude SCDM).

Not all dimensions of every capacitance value are listed below. It has been found that size varies almost linearly with capacitance value. As a result, dimensions of values between those specified below should be determined by interpolation.

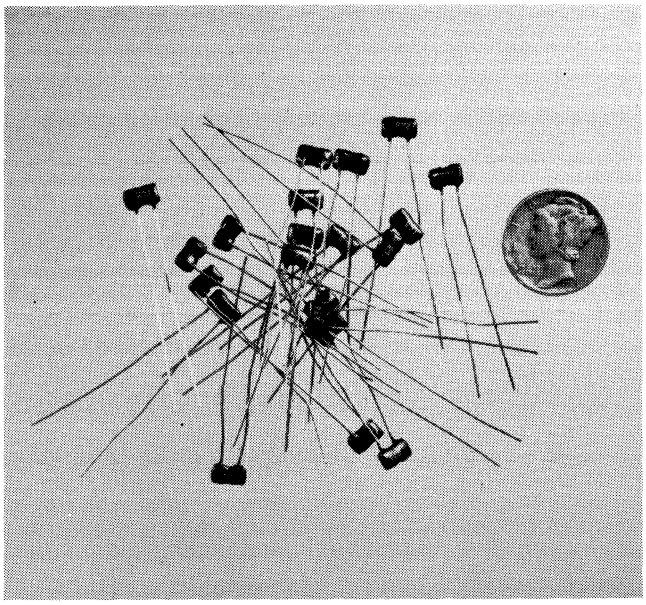
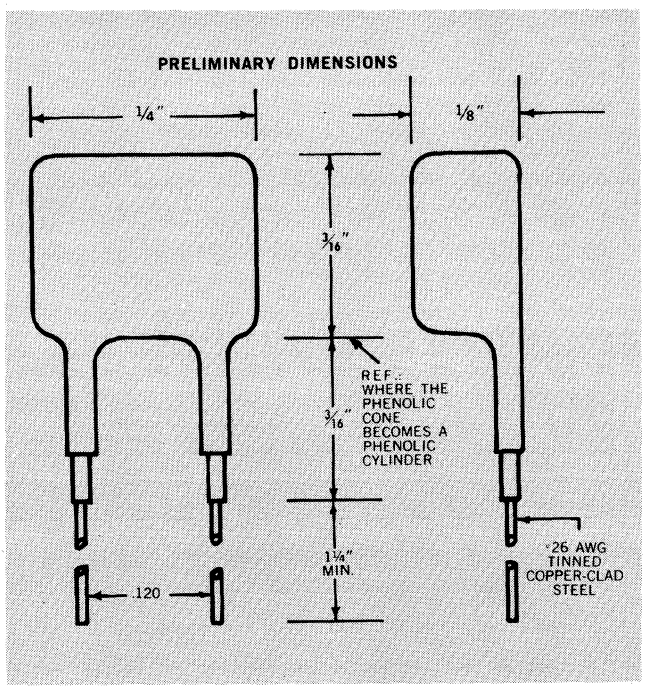
ELMENCO CAPACITORS — DM5 Miniature Dur-Mica



The new ELMENCO DM5 dipped silvered mica capacitor has been designed to keep pace with the ever-shrinking world of electronic circuitry. Significant volumetric savings are achieved in the lower values of capacitance through two principle changes in design. First, the area of each mica film has been reduced to get a better balance of area vs. thickness of capacitive section. This automatically resulted in further saving through redesign of other structural members to get more capacitance per cubic inch. Second, a newly developed dip-coat material is employed which imparts improved environmental protection with a far thinner coat than found on the larger mica capacitors of the ELMENCO line. The result is a much smaller capacitor in the 1 through 198 pf. range with the same reliability and high quality performance the industry has come to expect from ELMENCO mica capacitors.

DM5 capacitors have a standard voltage rating of 300 VDCW except for the highest values which are 100V and 50V ratings as indicated in the tabulation below. Electrical and environmental specifications are basically the same as for the other ELMENCO dipped mica capacitor styles. The capacitors are stamped with capacitance value in pf. followed by a letter signifying capacitance tolerance. For example, 27K would be 27 pf. ±10%; 150G would be 150 pf. ±2%. In the lower values, standard minimum tolerance is ±1 pf., but for an added charge we can produce ±0.5 pf. or even ±0.25 pf. capacitors.



The preliminary dimensions indicated above represent the expected maximum limits for the largest DM5 capacitors. At this printing the analysis of dimensions vs. capacitance for all values and voltages had not yet been completed. Due to the variation in size of capacitive section with value, dimensions will vary 30 to 40 mils between 1 and 180 pf. Final tabulation of case size dimensions in mils will be published in the next ARCO catalog similar to tabulations now shown for established case sizes. The lead spacing and specifications will not change.

ELMENCO CAPACITORS — DUR-MICA

SPACE-SAVER

TYPE SCDM THIN COAT DUR MICA CAPACITORS (ELMENCO TYPE ICR)

In applications requiring the high performance characteristics of dipped mica capacitors where space is at a premium, the Type SCDM reduced coat ELMENCO capacitors may often be used to advantage. A single protective resin coat is applied instead of the full series of dips incorporated in the standard unit. The amount of coat material is thereby reduced to a minimum consistent with good design, and a significant reduction of all dimensions is achieved.

All electrical and environmental requirements of MIL-C-5 are retained with the exception of case insulation (3.5.3) and moisture resistance (3.14). A maximum voltage stress of 100 VDC through the case insulation is recommended for SCDM units. Although some lots of this type capacitor will not meet stringent MIL moisture resistance specifications, all will meet the humidity requirements of Paragraph 2.3.6 of EIA Standard RS-153. Therefore, the SCDM capacitors will operate with satisfaction where they will not be exposed to extensive periods of high humidity. It is recommended that if these capacitors are destined for operation under extreme environmental conditions, they should be given additional moisture protection such as encapsulation or hermetic sealing of the assembly.

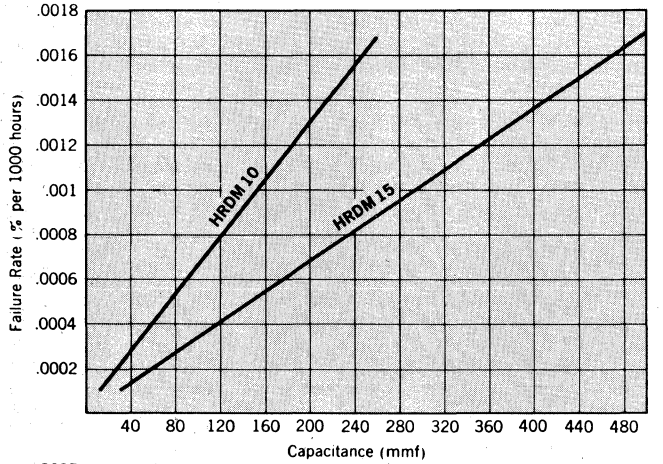
ELMENCO CAPACITORS — High Reliability Dur-Mica

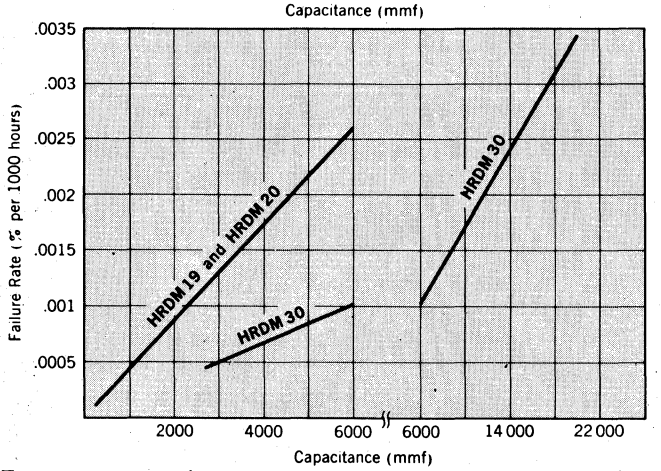
Type HRDM

Missile, Computer, and other applications wherein entire system performance depends on reliable operation of thousands of components has prompted development of a High Reliability line of ELMENCO Dur-Mica dipped silvered mica capacitors. Selected DM units are subjected to a special "debugging" process to eliminate potential early failures. This process is particularly effective when the capacitors are to be subjected to operation near their maximum rated temperatures. The HRDM capacitors are exposed to double rated voltage for 48 hours at 125°C. The graphs below indicate the reliability levels of these capacitors. The curves have been derived from the results of tens of thousands of hours of testing of tens of thousands of capacitors of all values and case sizes. Further information on the performance characteristics of HRDM capacitors is available upon request.

RELIABILITY OF ELMENCO HRDM CAPACITORS

Failure Rate in % per 1000 Hours (90% Confidence Level) vs. Capacitance Value ☐ 500VDCW Operation at 85°C.





To conserve catalog space, part numbers for each HRDM capacitor are not listed as they are for the standard units. Capacitance values are shown for each case size with corresponding list prices indicated for each standard tolerance. Voltage ratings are the same as for the standard DM capacitors.

To specify part number, merely prefix the regular DM part number by the letters "HR". For example, a high reliability DM15-101J would be called out by the part number HRDM15-101J.

ELMENCO CAPACITORS — High Voltage Dur-Mica

A new line of ELMENCO Silvered Hi-Voltage Dur-Mica capacitors is now available to complement the similar values in the molded configuration. These high voltage capacitors afford the same facility of use in low power applications by providing reliable operation in a small case size. Elmenco Dur-Mica capacitors may be substituted for similarly rated molded units normally supplied in the larger CM45, CM50, CM55, and CM60 case sizes.

The Dur-Mica design provides advantage of higher temperature operation (125°C. max.); radial leads for printed circuit application; higher capacitance in a given case size; and improved reliability. The dipped units, being solidly impregnated with corona resistant material, do not have the voids which make molded types susceptible to corona. As a result, the dipped capacitors can be supplied with voltage rating as high as 5000VDCW.

All Elmenco Dur-Mica capacitors are silvered mica construction. They conform to electrical and environmental specifications set forth in MIL-C-5 specifications.

The physical configuration of these capacitors is the same as for the standard DM units. This information is found on page 8. The only difference is that for a given capacitance value case dimensions will be larger for higher voltage ratings because the mica is thicker. The maximum case dimensions for each of the case sizes indicated below is the same as the maximums indicated in the tabulation.

Capacities from 5 to 2400 mmf. can be supplied in CM-19 cases. In values above 1000 mmf. the net prices for CM-19 are 10% higher than those listed above.

As can be seen in the line drawing above, the only difference between CM19 and CM20 is length dimension. For competitive reasons it has been necessary to retain both mold sizes. However both CM19 and CM20 fully conform to all specifications for MIL-C-5 case size CM20, and they are interchangeable for military requirements.

MICA CAPACITOR NOTES

Off standard capacitance values — non-standard values not listed in part number tabulations of molded and dipped mica capacitors are priced at next higher listed value and are subject to a $1.00 set-up charge per item.

Minimum tolerance — Regardless of capacitance and percentage tolerance indicated, the minimum absolute capacitance tolerance normally supplied is ±0.5 mmf. It is ARCO standard practice to supply ±0.5 mmf. automatically on orders for ±5% or ±10% which calculate to less than ±0.5 mmf. If ±2% or ±1% tolerance is specified, customer is notified of deviation for approval.

EXCEPTION: Standard minimum tolerance for DM10 is ±1 mmf. (±0.5 mmf available at added cost).

Source Inspection — Government Source Inspection is performed on MIL-C-5 capacitors, both dipped and molded, when specified. Prompt service is afforded on all items from case size CM-05 to CM-40 inclusive.

ELMENCO CAPACITORS — High Temperature Molded Silvered Mica

The standard Elmenco molded mica capacitor is designed for use at a maximum of 85°C., the former industry and military standard prior to issuance of MIL-C-5. Now, in some applications, these components are expected to operate without derating and with the same order of reliability at 125°C. The latter requirement is particularly difficult to cope with and obviously requires vast improvement over the standard design.

A specially designed Elmenco molded mica capacitor, designated type HTCM, has been developed which will afford complete satisfaction at the higher levels of temperature stress. The resulting units have been carefully evaluated in millions of unit-hours of life and environmental testing to verify their performance excellence.

In order to retain proper characteristics at 125°C., the following steps are taken:

1. Every mica film is screened for high temperature characteristics. This is done 100%, not on a sampling basis.

2. A special high temperature molding resin is employed to preserve the strength and electrical characteristic of the mica at 125°C. This molding material was also selected for the lower molding pressure required. This reduced stress greatly enhances the reliability of the mica films.

3. A solid high temperature impregnant is used instead of wax for greater stability and retention of the moisture resistance characteristic. Wax will have a tendency to melt out at high temperature, causing possible change in capacitance value, loss of moisture seal, and possible foulling of adjacent circuitry. The HTCM capacitors will remain physically and electrically stable at 125°C.

With these design innovations, vast improvement is obtained in operating reliability at elevated temperature. The expected failure rate is reduced to a small fraction of what might otherwise be expected of standard design capacitors.

HTCM CAPACITORS MEET ALL ELECTRICAL AND ENVIRONMENTAL SPECIFICATIONS FOR MIL-C-5 TEMPERATURE RANGE "O".

The Elmenco high temperature molded mica capacitor is designated simply by adding prefix letters "HT" to the standard part number. For example, a 100 mmf. ±5% CM-15, standard part number CM-15-E-101J, would be called an HTCM-15-E-101J, for high temperature operation.

To conserve catalog space, part numbers for each individual HTCM capacitor are not listed as they are for the standard units. Capacitance values are shown for each case size with corresponding prices indicated for each tolerance. Voltage ratings are the same as for standard CM capacitors.

THE HTCM15 CAPACITORS ARE NOW MOLDED IN A NEW FILLED-EPOXY CASE, GREATLY INCREASING RELIABILITY AND ELECTRICAL CHARACTERISTICS. THEY CAN NOW BE RECOMMENDED FOR CONSTANT OPERATION AT 150°C. ALL SPECIFICATIONS FOR MIL-C-5 TEMPERATURE RANGE "P" ARE MET.

ELMENCO CAPACITORS — High Voltage Molded Mica

Demand for smaller units in higher voltages designed to meet the requirements for TELEVISION, POWER AMPLIFIERS, LOW POWER TRANSMITTERS, and various INDUSTRIAL USES has increased. ELMENCO designed and produced units listed below are especially adaptable to compact circuits where space is an important factor. Their acceptance has been overwhelming by the various manufacturers of TELEVISION RECEIVERS.

In many cases, these units will do the work of capacitors molded in CM-45, CM-50, and CM-55 cases without breaking down. NO SPECIAL MOUNTINGS ARE NECESSARY; just wire right into the circuit.

The capacitors are molded in low-loss Phenolic Resin in CM-20, CM-35, CM-42 cases and tested at double the branded voltage. They are tested for dielectric strength, insulation resistance, temperature coefficient capacitance drift, susceptibility to humidity, and length of life, according to EIA Standards. All units are wax-dipped for protection against salt water immersion.

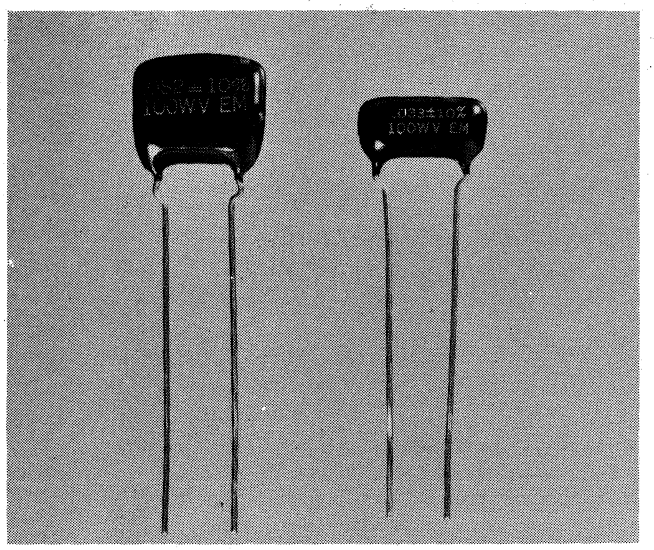
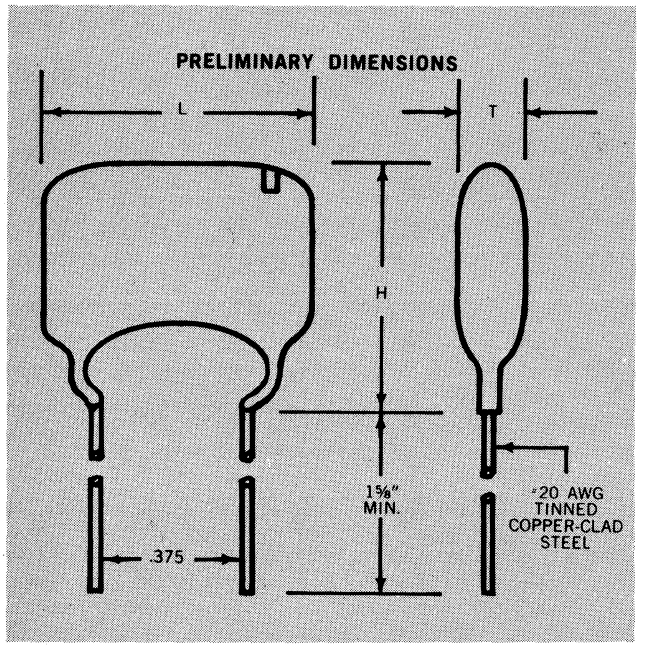
ELMENCO CAPACITORS — Epoxy-dipped Flat Mylar





These preliminary dimensions are established maximums for the four basic configurations of Type MDF. When dimensional surveys are completed on production representative of all values, individual dimensional information for each capacitance value will be published as for other dipped ELMENCO capacitors. Dimensions, particularly thickness, will vary with capacitance value.

The new ELMENCO Type MDF capactor is a mylar dielectric unit dipped in a newly formulated epoxy material and shaped in the flat configuration particularly suited to saving space on printed circuit boards. Before being brought to market, the design has been carefully evaluated for more than two years to be sure that the performance of the MDF will be of a level expected of ELMENCO capacitors. This release covers the 100VDCW rated series only. Dipped mylar capacitors with other voltage ratings will be announced shortly.

The specifications for the ELMENCO Type MDF are as follows:

Voltage Rating: 100VDCW, 250VDCT.

Insulation Resistance: 20,000 megohm-microfarads or 100,000 ohms, whichever is less, at 25°C.
At 85°C., the figures are 300 megohm-microfarads or 1500 megohms minimum; at 125°C., 20 and 100 respectively.

Maximum power factor at 1 kc.: 1.0%

Maximum cap. change from room temperature:
−7% at −55°C.
−3.5% at −30°C.
+4% at 85°C.
+17% at 125°C.

Capacitance drift: ±1% maximum.

ELMENCO CAPACITORS

DIPPED TUBULARS

MYLAR* and MYLAR-PAPER

* Reg. DuPont Trademark

ELMENCO dipped mylar and mylar-paper capacitors represent a double break-through in capacitor design. They combine missile and computer quality with commercial radio-TV cost. A recent development is the addition of precision dipped tubular capacitors in tolerances as low as ±1% in addition to the popular ±10% general purpose unit. The only difference between the general purpose "dp" series and the industrial precision capacitors lies in the extra stabilizing processes applied to close tolerance capacitors to insure retention of accuracy in the field under operating extremes.

Elmenco Type MPD capacitors are non-inductively wound and vacuum dipped to obtain solid impregnation and a rugged, moisture-proof coat. New fabricating techniques realize the full potential of the dielectric materials utilizing most of the low-cost procedures of the exclusive Elmenco dip-coat process. The result is a product of electrical excellence with high reliability in operation at 125°C. without derating. The specifications listed on this and following pages well-illustrate the inherent quality of these capacitors.

NOTE: The 100VDCW rated dp units are pure mylar* dielectric capacitors.

ELMENCO CAPACITORS — DIPPED TUBULARS

MYLAR*and MYLAR-PAPER

* Reg. DuPont Trademark

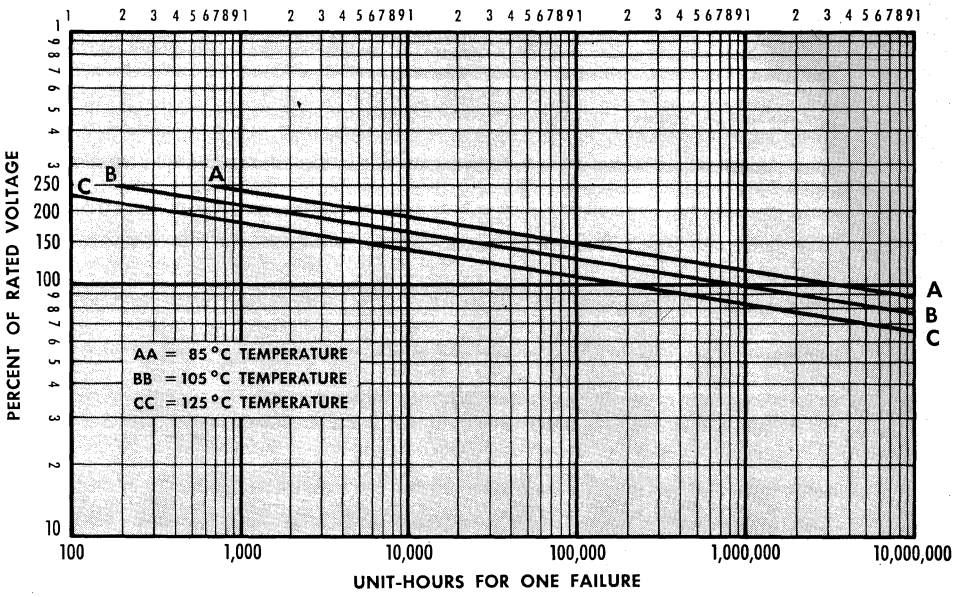
RELIABILITY

Exhaustive evaluation of ELMENCO Dipped Mylar*-Paper Capacitors has been conducted during the past four years and the product refined to its present high level of quality. The graph to the right is a plot of typical life expectancy for a theoretical 1 MFD. unit expressed in unit-hours operation to first failure as a function of voltage and temperature. It will be noted that those capacitors can be operated at 125°C. in most applications with excellent reliability.

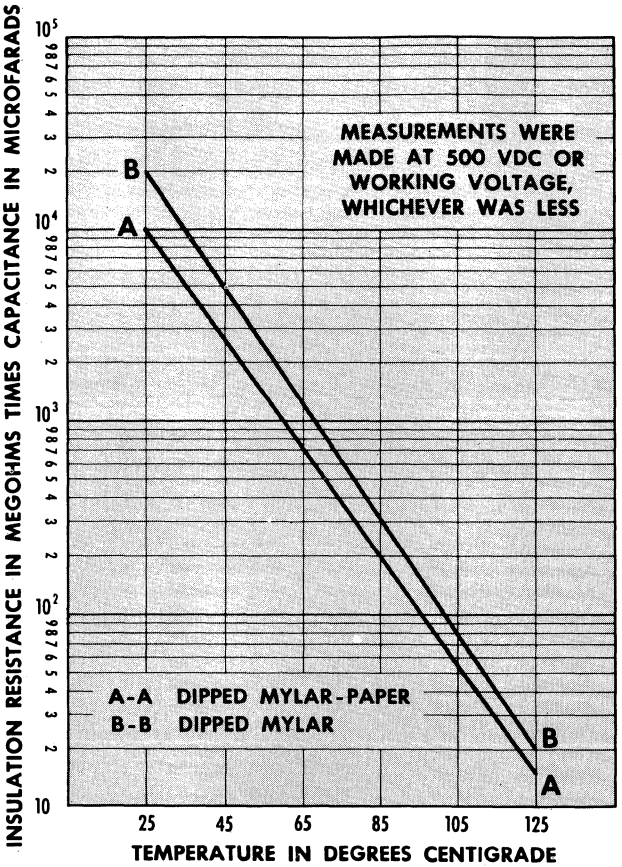
The number of unit-hours to first failure is inversely proportional to the capacitance value in mfd.

As an example, a 0.1 mfd. capacitor operated at full rated voltage and at 105°C. will have a life expectancy of 10 x 500,000 or 5,000,000 unit-hours to first failure. This quality level is continually verified by continuing accelerated life testing on all production.

MINIMUM LIFE EXPECTANCY FOR 1 MFD MYLAR*-PAPER DIPPED CAPACITORS AS A FUNCTION OF VOLTAGE AND TEMPERATURE



MINIMUM INSULATION RESISTANCE VS. TEMPERATURE



These curves represent characteristics as they change with temperature. They have been charted only after thorough long-term testing of thousands of capacitors to assure validity.

ELMENCO CAPACITORS — Variable Compression Mica

TRIMMERS

Elmenco Trimming Condensers are treated for resistance to humidity and for permanence of capacity setting.

The base is made of the lowest dielectric loss ceramic material available and the mica is clear India Ruby.

The soldering lugs may be bent in any position without affecting capacity setting due to the rigid construction of adjusting plates.

Trimmers shown here are standard sizes and capacities.

Voltage 350 VDCT — 175 VDCW.

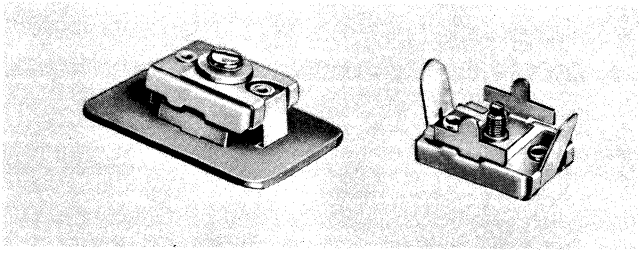
TYPE PC — PRINTED CIRCUIT TRIMMERS



The Elmenco Trimmer capacitors, Types 40, 42, and 46, have been adapted for printed circuit techniques through alteration of terminals and mounting configuration. The holes in the terminal lugs are removed since necessity for hook-up is eliminated. The resulting solid terminals have greatly increased spring action, allowing the trimmer to be "snapped in" the printed circuit board and firmly held until solderd. The mounting lug portion of the trimmer has also been modified to facilitate positioning and support of the unit. Drawings of the trippers and mounting layout are available upon request at no charge.

This printed circuit style is identified by the prefix letters "PC" preceding the regular part number. All listed values are available in the PC style.

For list price add $0.05, for net price add $0.03, to the respective prices of the standard trimmer.

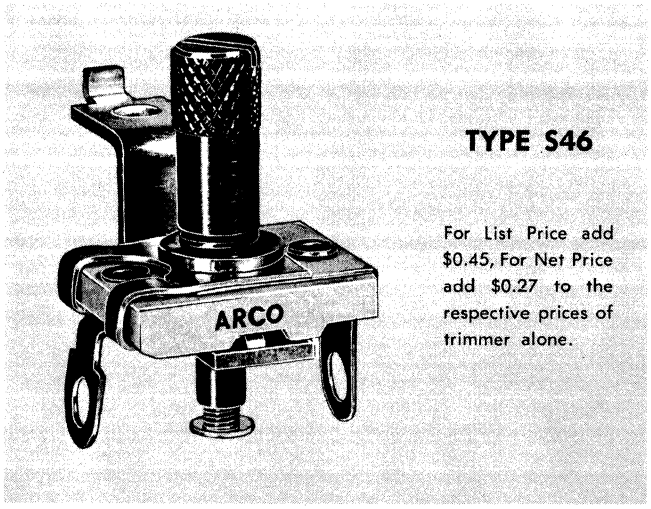
VARIABLE COMPRESSION MICA CAPACITORS



TYPE S46

For List Price add $0.45, For Net Price add $0.27 to the respective prices of trimmer alone.

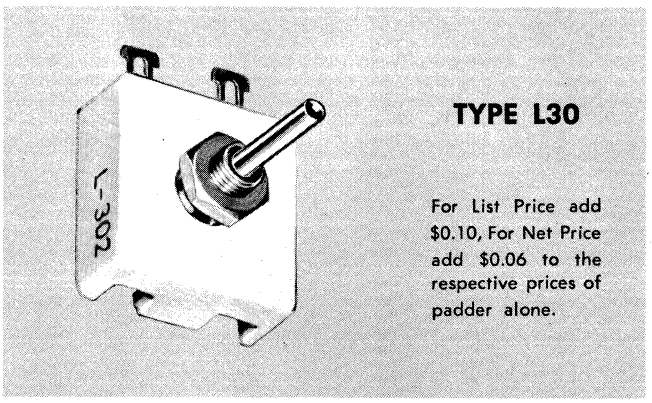
A complete Type 46 trimmer assembly with mounting bracket and adjusting shaft for ease of tuning. Can be supplied as pictured from stock or with construction variations to order.

To specify precede trimmer part number with the letter "S".

For example:
Type 460 trimmer will be ordered as S-460.

The two new assemblies shown at left have been developed due to increasing demands for miniaturized tuning devices. However, certain precautions must be taken in design so that these variable mica capacitors are not used in circuits for which they are not adapted. These assemblies are highly stable for components of their design, but they do not match the stability of the air dielectric tuners. Short term drift of the mica trimmers and padders after tuning is negligible. Long term drift at one setting due to changes in atmospheric conditions and physical motion should be well within ±2%.

It should also be remembered that variable compression type mica capacitors do not have linear variation with adjustment. Rate of change of capacity decreases per turn as the screw is withdrawn. For example, a 306 padder will reduce to half the nominal maximum value within one opening turn. Those with a greater number of plates require further screw disengagement for a similar percentage reduction in capacity value. On the other hand, a 302 padder will reach one-half the nominal maximum in less than one-half turn open. Type 46 trimmers operate in much the same way. Detailed information on specific sizes is available upon request.

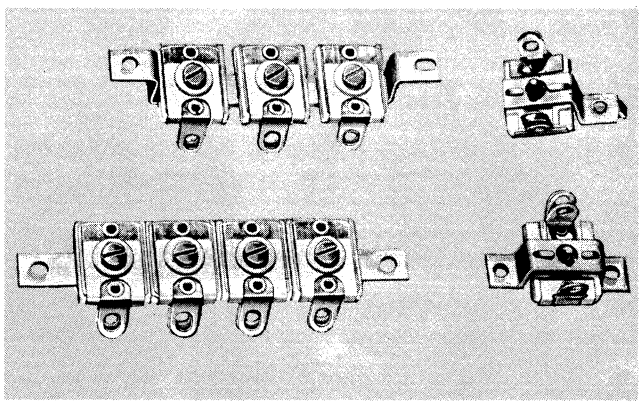


TYPE L30

For List Price add $0.10, For Net Price add $0.06 to the respective prices of padder alone.

The Type 30 or Type 30M padder can now be obtained with a special adjusting screw which has been lengthened to accommodate a tuning knob. To obtain a padder with the special screw, precede the regular padder part number with the letter "L". For example, a 302 padder with the special screw would be specified as "L-302".

NOTE: Knobs may also be obtained if desired at a cost of 30¢ each list, 18¢ each net.



Mounting brackets as illustrated above can be supplied for all types of trimmers in flat "Z" (single mounting hole with or without non-rotational stop), and "U" (dual mounting hole) configurations.

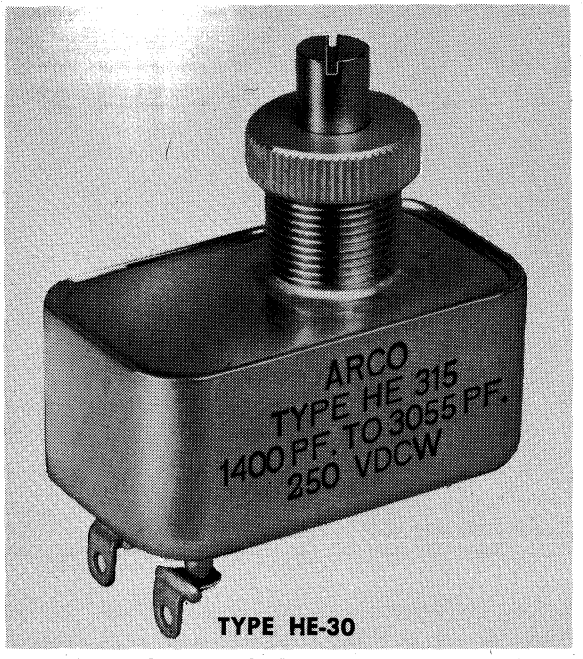
ARCO CAPACITORS

Hermetically-Sealed Variable Compression-Type Mica Capacitors



TYPE HE-30

HERMETICALLY-SEALED VARIABLE COMPRESSION-TYPE MICA CAPACITOR

ARCO introduces the first hermetically-sealed variable compression-type mica capacitor. Designated as Types HE-30 and HE-30M, these units employ a specially designed enclosure that protects them against the effects of moisture, pressure variation, fungus, salt spray, dust, and mechanical damage. Additionally, the case provides effective electrostatic shielding.

The basic capacitor design is the time-tested Type 30 padder with established reliability verified by more than 25 years of operational experience.

The enclosure measures 1 9/16" by 15/16" by 3/4" deep. The drawn brass can is hot tin dipped and all mechanical parts are nickel-plated brass. The capacitor element is completely insulated from the case and connection is made at the rear by means of two lugs mounted on glass-to-metal seals. The unit is designed for single-hole panel mounting using a 15/32" — 32 bushing. A bushing nut is furnished as part of the assembly. Rotational control can be either by means of a screwdriver slot at the end of the 1/4" shaft or by means of a standard knob of the user's own choice. The rotary shaft seal enhances the stability of the shaft setting under conditions of shock and vibration. For complete locking of the shaft after adjustment, an accessory shaft lock is available. This shaft lock also provides redundant protection where the ultimate in reliability is needed.

The HE-30 is a 250VDC rated series in 14 discreet capacitance ranges from 15-130 PF to 1400-3055 PF. The HE-30M is a 500VDC rated series, also in 14 similar ranges from 15-120 PF to 1200-2525 PF. These are guaranteed minimum ranges in three turns of adjustment. Dissipation factor at 1MC is better than .001. Insulation resistance is better than 100,000 megohms.

Stability of the capacitance varies with the particular setting, however, a conservative design limit is a maximum of ±3% change caused by all combinations of temperature cycling, vibration, shock, hysteresis, etc. As the extremes of environment are reduced toward laboratory conditions, the stability will be improved at least ten-fold or to ±0.3%. Operating temperature range is −55°C. to +85°C.

ARCO CAPACITORS — CERAMIC DISC

GENERAL INFORMATION

Arco ceramic disc capacitors exhibit a level of performance and reliability consistent with conservative design technique inherent in all Arco components. Higher voltage ratings improve reliability manyfold and provide extra reserve for resistance to surges and temporary overloads. Rugged phenolic coating and high temperature wax impregnation give superior moisture resistance and physical strength. Arco ceramic discs have been designed to minimum size obtainable with complete retention of original specifications while operating in the field. For original equipment or for replacement, Arco ceramic disc capacitors may be used with confidence.

MINIATURE GENERAL PURPOSE

Arco Type CCD ceramic disc capacitors have improved ceramic bodies which impart longer life and greater stability to any application. The standard CCD line has a ±10% tolerance and 1000VDCW rating, making possible a single ceramic disc stock for universal use. Whether a broad coupling or by-pass application, or a critical close tolerance use, Arco CCD units fill the bill with dependability and economy. The "space-saving" size of Arco discs is another feature designed to offer greater service convenience with complete safety of operation. In addition to the 1000VDCW line, higher voltage ratings are available in Type CCD units. 3000-VDCW (Type 3CCD) and 6000VDCW (Type 6CCD) disc ceramics are supplied in tolerance of ±20%.

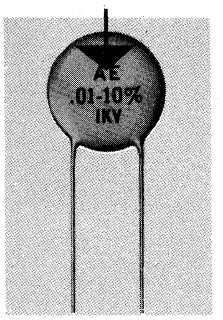
LOOK for the "AE" brand on all ARCO disc ceramic capacitors



ARCO disc ceramic capacitors are now packed in durable, compact plastic boxes at no extra cost. Each box contains five disc ceramic capacitors of the desired rating. Leads are kept straight . . . capacitors are always factory clean. Available at ARCO distributors everywhere.

TEMPERATURE STABLE

This new ARCO ceramic capacitor maintains excellent capacitance stability with wide temperature variation. The graph illustrates typical percentage variation of capacity value with temperature. The operating temperature range has been extended to −55°C. to +125°C. without derating of the 1000VDCW specification. Standard tolerance is ±10%. The combined small size, low cost, and high stability represents another significant advance in the quality line of ARCO capacitors. All units are marked "TS" for identification.

ARCO CAPACITORS — CERAMIC DISC

TEMPERATURE COMPENSATING

TYPE CCTO

Arco Type CCTO ceramic disc capacitors are zero temperature coefficient units specifically suited for high stability, high Q application. In addition to extreme temperature stability, Type CCTO capacitors have very high insulation resistance and low aging rate. These special characteristics are added to the high 1000VDCW rating and close tolerance of the entire Arco ceramic line to provide a superior capacitor for the special purpose intended. Type CCTO capacitors are identified by "NPO" printed on each unit.

TYPE CCTN

Another member of the Arco temperature compensating disc ceramic line is the Type CCTN unit which has a negative temperature coefficient of −750 ppm/°C. (N750). These units are used to counterbalance shifts in other circuit components with change in temperature. The result is a more stable circuit essential to many frequency control applications. Improved ceramic bodies in the temperature compensating line provide greater long term stability in addition to accurate temperature compensation. Type CCTN capacitors are identified by "N750" imprinted on each unit except the smallest size. On the small units the E.I.A. temperature coefficient designation "U2" is imprinted.

ARCO CAPACITORS — Miniature Aluminum Electrolytics Type ME

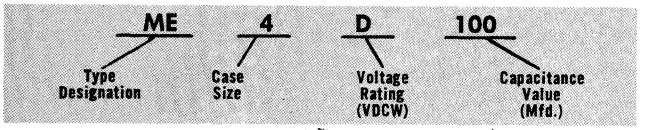
Type ME Miniature Aluminum-cased Electrolytics are the latest addition to the Arcolytic capacitor line. They use the same high purity (99.99%) etched aluminum foil as the standard size Arcolytics. The design of the ME is particularly adapted to the latest transistorized circuitry which features low voltages and compactness of structure.

OPERATING TEMPERATURE RANGE: −30°C. to +85°C.

TOLERANCE: −10%, +100%

LEADS: Axial, 1½", #20 tinned copper

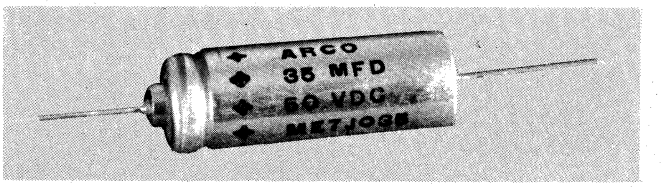
NOMENCLATURE: The part numbers for each Type ME value incorporate case size, voltage and capacitance:-



The example describes a 100 mfd. 12V capacitor, case size ⅜" x ¾".

VOLTAGE RATINGS: Working voltages begin as low as 3 VDCW and extend to 350 VDCW. The voltage ratings are:-

Letter Designation	A	B	D	E	G	J	M	N	R	T
VDCW	3	6	12	15	25	50	100	150	250	350



Type ME capacitors have an all-welded construction which provides increased ruggedness and resistance to environmental extremes. Corrosion and electrolyte leakage is eliminated. Electrically, they exhibit extremely low leakage current and maintain extended shelf life without deterioration. All units are insulated with a transparent plastic sleeve permanently bonded to the aluminum body.

CASE SIZE: Type ME capacitors are made in 8 different case sizes:

CASE SIZE	DIMENSION	CASE SIZE	DIMENSION
1	¼" D x ⅝" L	5	⅜" D x ⅞" L
2	¼" D x ¾" L	6	⅜" D x 1" L
3	⅜" D x ⅝" L	7	⅜" D x 1⅛" L
4	⅜" D x ¾" L	8	⅜" D x 1⅜"L

The insulating plastic sleeve adds $\frac{1}{32}$" x $\frac{1}{16}$" to case dimensions.

STANDARD PACKAGING is in units of 5 in a custom-designed box which protects straight leads and allows visual observation of quantity through a clear plastic window.

ARCO CAPACITORS — PLASTIC FILM CAPACITORS

Type PT capacitors are polystyrene dielectric enclosed in non-ferrous metallic tubes with compression glass end seals. The principle features of this type are high stability, high insulation resistance, low dielectric absorption, and low dissipation factor. Their principle uses include precision filter and tuned circuits, analog computer circuits, pulse networks, servo systems, reference capacitors, and high Q applications.

SPECIFICATIONS:

DISSIPATION FACTOR: .01% max. at 25°C. .02% max. at 85°C.
INSULATION RESISTANCE: 10^5 megohm-microfarads min. for 100VDCW and 200VDCW units; 10^6 megohm-microfarads for 400-VDCW and higher ratings (at 25°C.)
TEMPERATURE RANGE: —55°C. to +85°C.
TEMPERATURE COEFFICIENT: —120 ± 15 ppm/°C. This specification may be tightened if required for specific values.
DIELECTRIC ABSORPTION: .05% max. at 25°C.
STABILITY: ±0.1% maximum capacitance drift long term under maximum operating conditions.
TOLERANCES: standard tolerance ±5%. Also available, ±10% ±3% ±2% ±1% ±½ ±¼%.

Type PJ capacitors are polystyrene dielectric enclosed in silicone treated fused polystyrene jackets. The same superior quality of the Type PT hermetically sealed units is preserved in Type PJ units while effecting a marked saving in both size and price. Extensive evaluation has confirmed the excellent moisture resistance of this design as well as extreme ruggedness. The Type PJ will meet MIL tests for vibration, shock, moisture resistance and immersion as well as providing the excellent electrical characteristics specified.

CORNING® FIXED GLASS CAPACITORS

For coupling, decoupling, filtering, timing, switching or computer circuits, CORNING Capacitors provide ultra-stable electrical performance. This stability is inherent in their fused glass and aluminum foil capacitive elements. These inorganic materials and continuous process and quality monitoring are responsible for the well-known CORNING CYFR capacitor made for the Minuteman. Many of the basic advantages of the CYFR have found their way into the standard CYFM and TYO units. The properties of these capacitors are entirely those of the closely controlled dielectric, and can't be changed by assembly methods or subsequent treatment. At 1 Kc and 25°C, dissipation factor is less than 0.001; at any given temperature, TC will not deviate from the curve by more than 5 ppm.

Corning manufactures highly stable fixed glass capacitors to meet your demanding circuit requirements. Their performance and economic advantages will add value to your equipment.

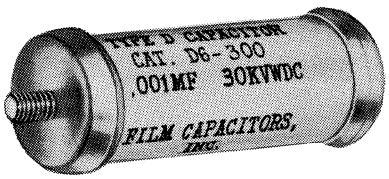
FILM CAPACITORS, INC.

TYPE D6 HI-VOLTAGE TUBULAR CAPACITORS



F-C-I Type D6 high voltage capacitors are designed to assure reliable operation where space is at a premium. These capacitors utilize a combination of polyester film and high quality capacitor tissue. The impregnation in a highly purified mineral oil provides for extremely high insulation resistance and low power factor. The hermetic steatite housing allows for operation under extreme humidity.

All capacitors are constructed with extended foil windings, and all internal wiring is kept to a minimum. This eliminates most of the series inductance and produces a very high ringing frequency, an extremely desirable condition for energy storage and pulsing capacitors.

SERVICE-DESIGNED CAPACITORS

HOW TO SELECT THE RIGHT REPLACEMENT

It is easy to select the right G-E replacement for any aluminum electrolytic capacitor used in the past ten years.

IF YOU KNOW RATING ONLY: Refer to correct type of capacitor and locate the G-E capacitor with desired characteristics. For example if you need single-section tubular with capacitance of 55 mfd at 450 V, refer to QT TUBULAR ELECTROLYTICS, Single-Section. Look for the capacitance range in which 55 mfd falls (QT1-17: 40-**60** mfd; QT1-18: 50-**60** mfd; QT1-19: 50-**60** mfd). The rating in bold-face type (60 mfd in the above rating) is the absolute or maximum rating. Check voltage required. Since QT1-19 is the only one rated for 450V, it is the correct replacement.

If rating needed were 55 mfd at 250 volts you could correctly use either QT1-18 (up to 350V) or QT1-19 (up to 450V), since G-E capacitors will work properly at any voltage up to their maximum rating. You would then choose between QT1-18 and QT1-19 on the basis of the size (¼" difference in length) or price and probably choose QT1-18.

TO SELECT MULTI-SECTION UNITS (either tubular or can-type,) follow this same process for each section. Here's a quick way to do it:

1. List values of original capacitor sections in ascending order of value.
2. Match values with their voltage ratings.
3. Find G-E units that most closely match capacitance values starting from the lowest value. Use next higher value if first unit value does not match exactly.
4. Be sure that G-E voltage ratings equal or exceed original voltage ratings. Proper replacement will usually fall within two or three catalog numbers of the first unit checked.

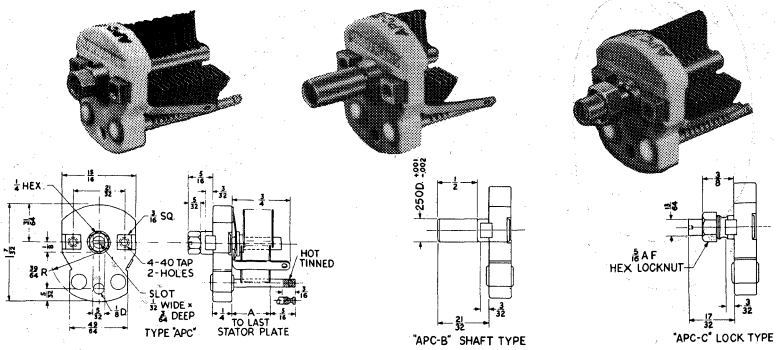
88 STANDARD TYPES OF VARIABLE AIR CAPACITORS



APC capacitors are available in three basic groups. The original APC group is furnished with a hex collar on a slotted shaft as indicated in the drawing. The APC-"B" group is furnished with ¼" diameter shafts to permit adjustment of the capacitance with a front panel knob. The APC-"C" group is supplied with slotted shafts for variation of the capacitance and a 5/16" hex locknut to prevent movement of the rotor in equipment subjected to high levels of vibration or shock.

HIGH VOLTAGE CAPACITORS
TYPE LK

MYLAR★ PAPER FILTER CAPACITORS

TYPE LK Capacitors are specifically designed for filter, bypass and coupling applications in the low audio frequency range. The CP70 style container and internal construction permit operation in any position. Glazed steatite bushings are used, and in the voltage ranges of 2000 and greater, steatite is the electrical insulation in the terminal assembly. The threaded stud terminal is supplied with nut, lockwasher and/or solder lug. The whole assembly is hermetically sealed.

MALLORY Dry Electrolytic Capacitors

METAL CAN ELECTROLYTIC CAPACITORS

FP-WP capacitors are designed for 85° C operation, and have standard twist-prong mounting lugs with solder terminals. PFP-PWP types use standard EIA printed circuit terminals and can be used in place of normal solder terminal types. FPS is special mounting for auto radios. FP-WP types may be adapted to printed circuit mounting by using an **FPA Adapter Kit** (Net Each, **27c**). All types use "etched cathode" construction for hum-free operation, and have an exclusive vent and seal design. Standard tolerance: Up to 50 WVDC, −10% to +150%; 51 to 350 WVDC, −10% to +100%; 351 WVDC and up, −10% to +50%. *Sizes shown are at end of listing.

MALLORY Tantalum Capacitors

Mallory tantalum foil capacitors are available in either **etched** or **plain foil, polarized** or **non-polarized,** and in two temperature grades (**+85° C** or **+125° C**). Standard ratings shown below and on the next page are listed with **uninsulated** cases. For **insulating** sleeve, add "one" to type shown (CL20 becomes CL**21**, etc.) and add **10c** to prices shown. Case sizes, tolerances and industrial net prices are shown in the table at the bottom of this page. These capacitors are also available to Mallory commercial numbers (TAF, TAG, TBF, TBG, etc.). For details on these numbers ask for Technical Bulletin 4-65.

TAM SOLID ELECTROLYTE

TAM

Mallory TAM tantalum capacitors are made to the same exacting standards as the TAS types. The TAM is designed for printed circuit board applications and has parallel leads 1½″ long spaced .200″ apart. Case is premolded plastic with polarity markings on the top. Temperature range is −55° C to +85° C. Standard tolerance: ±20%. Stability and life characteristics are ideal for low voltage, low impedance transistorized circuits. Complete technical specifications and typical life test data is given in Technical Bulletin 4-47.

MALLORY Tantalum Capacitors

MIL-C-3965 CL64/65 MINIATURE METAL CASE WET-SLUG TANTALUM CAPACITORS (TLS)

Mallory CL64/65 (TLS) sintered anode tantalums have flangeless case, ideal for high density packaging. Completely replaces the older CL44/45 MIL type. Type CL64 exhibits very high performance and very low DCL. Supplied in two temperature grades: −55° C to +85° C and −55° C to +125° C. Tolerances: ±10% **(K)**, ±20% **(M)**, −15% +30% **(S)** and −15% +50% **(T)**. Types listed are in plain, uninsulated case; for insulating sleeve, specify CL65 and add **5c** to prices shown. **Complete specs in bulletin 9-351.**

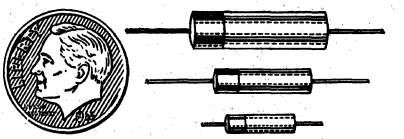
MTP/MTPH ULTRA-MINIATURE TANTALUM CAPACITORS



Mallory MTP/MTPH capacitors provide the greatest capacity-voltage product of any tantalum type. Sintered anodes are housed in special silver cases with elastomer end seal, and are completely insulated. MTPH types are manufactured to rigid "Minuteman II" standards with zero failures in 3.7 million unit-hours of testing. Type MTP is the commercial equivalent. Operating Temp.: −50° C to +85° C. Tolerance: ±20%. DCL is extremely low. **See bulletin 4-70 for details.**

capacitors

SANGAMO ELECTRONIC COMPONENTS

Type 500 Computer Electrolytic

FOR HIGH RIPPLE AND HIGH TEMPERATURE APPLICATIONS

The Sangamo Type 500 capacitor represents the optimum design in electrolytic capacitors for storage and filter requirements in high reliability circuits requiring 85°C operation. An exceptional anode surface gain and better production control have been achieved in perfecting the Type 500. These advanced techniques, plus the use of the best electrolytes, result in capacitors having lower ESR which may be operated at higher ripple currents and in case sizes smaller than conventional capacitors. All units are supplied with screw terminals. Mounting brackets are furnished at extra cost. ***For more complete information write for Bulletin 2236.***

SANGAMO ELECTRONIC COMPONENTS

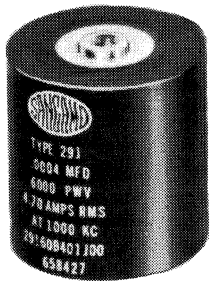
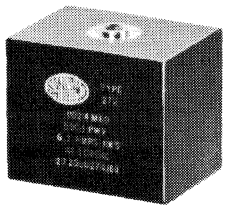
Types 271-272-273-291-292-293-294 MICA CAPACITORS



TYPE 291



TYPE 272

Sangamo transmitting cast mica capacitors are supplied in seven basic case sizes. They are encapsulated in a high quality thermo-setting compound which eliminates moisture intrusion and makes them highly shock resistant. These capacitors are designed for frequencies ranging from 100 kilocycles per second to 3 megacycles per second and are ideally suited for high current and high voltage circuits.

In capacitance and current ratings, Sangamo cast mica units are equivalent to MIL-C-5 Types CM65 through CM90 in molded and ceramic cases, but in environmental capability, operating temperature range, physical size, mounting configuration and reliability, they are far superior. ***FOR MORE COMPLETE INFORMATION WRITE FOR BULLETIN 2324.***

SANGAMO ELECTRONIC COMPONENTS

Type S Subminiature Hermetically Sealed Metal Tubular Capacitors

Sangamo Type S capacitors are designed to meet the demands for a high quality, hermetically sealed paper tubular capacitor. They are encapsulated in brass tubular cases finished with a high tin content alloy. Hermetic sealing is accomplished by using glass-to-metal solder seal terminals. The impregnant used in these units is Etherm, an oil of high thermal stability and superior electrical characteristics over the temperature range of -55°C to +125°C. Sangamo Type S capacitors meet the case sizes and performance requirements of military specification MIL-C-25. The limited number of popular listings below are furnished with insulated sections. They are also available with grounded case if equipment requirements so dictate. The adjacent cross reference table will assist in the interpretation of Sangamo catalog nomenclatures with the various military types and case constructions.

For more complete information on other ratings, tolerances and voltages, write for Bulletin 2421.

SANGAMO ELECTRONIC COMPONENTS

Types 40-41-42-43 PAPER

Sangamo Types 40, 41, 42 and 43 paper dielectric capacitors are ideal for use in high voltage filter applications. Enclosed in aluminum containers, they mount to the chassis by means of a 3/4-16 threaded neck. In the Types 40 and 42, one connection is provided by an insulated terminal and the other is provided by the case and washer with a solder lug. In the Types 41 and 43, both terminals are completely insulated from the case. Each of the 4 types is provided with mounting nut and lockwasher. The Types 40 and 41 are impregnated with Diaclor to provide an F characteristic. Types 42 and 43 are impregnated with mineral oil to provide an E characteristic. All units are designed in accordance with electrical characteristics of MIL-C-25.

Type HVC HIGH VOLTAGE PAPER CAPACITORS

Sangamo Type HVC High Voltage capacitors are impregnated with a halogenated hydrocarbon called Diaclor B. This oil provides the desirable electrical performance characteristics for the most severe applications. They are sealed in shock and vibration resistant drawn rectangular or cold-rolled steel cases. The absence of solder seams eliminates oil leakage and contamination from solder flux. A wide variety of capacitance ranges are available in voltage ratings up to 50,000 volts d-c. Spade, footed or wrap-around brackets are optional at extra cost, but will not be furnished unless requested. When choice of brackets is not indicated, spade type will be supplied.

SPRAGUE CAPACITORS

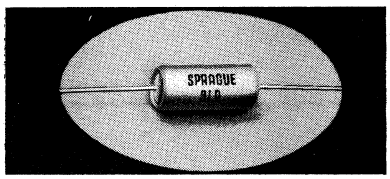
VITAMIN Q® SUBMINIATURE PAPER CAPACITORS



These capacitors are the most widely used of all paper capacitors in commercial and military electronic equipment. Hermetically sealed in metal cases, they are electrically and mechanically designed to meet stringent operating requirements.

Impregnated with Vitamin Q, a substantially linear, controlled molecular weight, hydrocarbon polymer, which is exclusive with Sprague, these dependable capacitors are available for operation in two temperature ranges: −55°C to +85°C and −55°C to +125°C. Because of their Vitamin Q impregnation, these subminiature capacitors have a higher insulation resistance and longer life than comparable units with ordinary oils.

Sprague Subminiature paper capacitors exceed the performance requirements of military specification MIL-C-25A. A limited number of the ratings shown here are listed in the military specification and should be ordered by their MIL type designation where equipment specifications so require. (See page after next.)

Listed below are the most popular insulated section (ungrounded case) capacitors. For technical data on these and other types, ratings, and tolerances, as well as on wax-impregnated units for absolute minimum size, refer to the latest issue of Engineering Bulletin 2110.

Call your Sprague Industrial Distributor for Current Quantity Prices.

CHOICE OF INSERTED TAB OR EXTENDED FOIL CONSTRUCTION

In the past, inserted tab capacitors have not been recommended for low-voltage applications (e.g., below 10 volts) but recent improvements in design now make it possible to recommend them for operation at all voltages from 1 to rated, in nearly all applications.

From the application standpoint, the principal difference between the two construction types is that, at resonance, losses are likely to be lower in the extended foil type. This is because the resistive component of impedance is likely to be higher at resonance in the inserted tab type of construction. Unless unusual circuit requirements make the losses at resonance a critical factor, the inserted tab construction is recommended, primarily because of the smaller size of the capacitor roll.

- The Best of Their Type Possible to Produce at the Present State of the Art
- Rated for Operation at 125°C WITHOUT VOLTAGE DERATING
- Unique Dual Dielectric —a Combination of Metallized Paper and of Polyester Film, Impregnated With Special High-Temperature Mineral Wax
- Subjected to Stringent Quality Control During Manufacture
- Higher Insulation Resistance Than Any Other Metallized Paper Capacitors—at 125°C, Minimum Product of Insulation Resistance and Capacitance is 10 Megohm-microfarads for 200 V Units or 40 Megohm-microfarads for 400 and 600 V Units
- Capacitor Sections are Effectively of Non-inductive Construction, Resulting in Capacitors Unmatched in Performance Quality by any Other Metallized Capacitors
- Hermetically Sealed, with Glass-to-metal Solder-seal Terminals
- Have Unusual Self-healing Characteristics, in the Rare Event of Capacitor Dielectric Breakdown
- May be Used at Extremely Low Voltages Where Metallized Paper Construction has Previously Been Unsatisfactory
- For Complete Performance Characteristics, see Latest Issue of Engineering Bulletin 2211
- For Units With Outer Plastic Insulating Sleeves, Change Last Digit of Cat. No. From "2" to "4"
- Capacitors Listed Below Are Ungrounded Case (Insulating Section) Units Without Outer Insulating Sleeves. For Information on Other Styles Consult Your Sprague Industrial Distributor

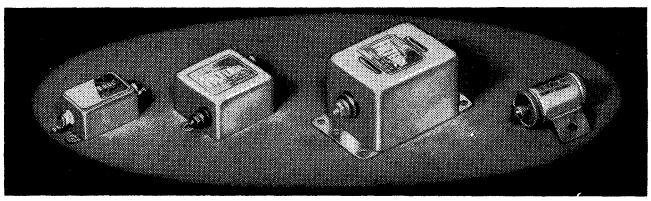
FILTEROL® FILTERS



FILTEROL 1 FILTEROL 2 FILTEROL 3 FILTEROL 4

Filterol Types 1, 2, and 3 — Designed for connection in series with power supply lines to interference-producing devices . . . A 3-terminal network with the case as one terminal . . . The selected filter should have a rating higher than the continuous operating current of the offending device . . . A single Filterol connected to the high side of the line is usually sufficient . . . In severe cases a Filterol in each leg of the power line may be necessary . . . For three or four-wire systems, a Filterol in each wire is necessary.

Filterol Type 4 — A new, exclusive Sprague development incorporating a Sprague HYPASS® Capacitor . . . Provides exceptionally high attenuation at frequencies above 5 megacycles . . . Intended for small devices with continuous current ratings up to 20 amperes.

Cat. No.	Amps.	Volts AC or DC	Size

TANSITOR TANTALUM CAPACITORS

TYPE: TES −55°C to +85°C

Tansitor Type TES tantalum capacitors are unique small foil tantalum capacitors ideally suited for use in printed circuits. They are similar in performance to CL34 and CL24 type capacitors, but offer significant savings in space because both leads emerge from one end of the capacitors. They operate reliably over the temperature range of −55°C to +85°C.

As the name implies, Tansitor Type CM or custom-made capacitor "packages" are designed to fill special or unusual tantalum capacitor needs, most frequently in the area of extra high capacitance.

In most cases, Type CM units have employed tantalum foil internally. By its nature, however, a CM unit may employ internal sections of solid or wet sintered anode tantalum capacitors where their respective characteristics are desired. Combinations of foil, solid and wet styles are also available, if needed.

A wide range of ratings are available, with capacitance values as high as 310,000 microfarads. The CM series, however is adaptable for many ratings beyond those suggested, even to 1 farad and above, if required.

Dual or plural ratings are available in a single case or other components can be potted in the same case with the capacitors. For specific applications contact Tansitor Electronics, Inc.

TANSITOR TANTALUM CAPACITORS
TYPES: CL64 & CL65 — CHARACTERISTICS "B" & "C"
−55°C to +85°C and −55°C to +125°C

Tansitor wet sintered anode capacitors listed herein are manufactured to meet all the requirements of MIL-C-3965C for MIL types CL64 and CL65. Encased in a fine silver can, the sintered porous tantalum anode provides exceptionally high capacitance per unit volume. These units exhibit extremely low leakage currents, low power factor, and little change in capacitance with frequency.

As opposed to "Shoulder Type" construction of other wet types, the CL64 and CL65 offer a straight cylindrical shape, readily lending them to flat circuit applications. CL 64 and CL65 styles are equivalent to Tansitor Type W. Tansitor Type WF equivalent with neutral electrolyte is also available.

T3	0.766 x 0.375

*For dimensions of insulated units add approximately 0.065″ to length, 0.015″ to diameter. Basic case dimensions for insulated style are same as uninsulated.

TANSITOR TANTALUM CAPACITORS — TYPE WF

(Equivalent to MIL Styles CL64 & CL65)

−55°C to +85°C and −55°C to +125°C

Tansitor type WF capacitors listed herein are manufactured to meet all the requirements of MIL-C-3965 for the ratings listed under MIL Types CL64 and CL65, except that tantalum foil is used in place of tantalum sintered slugs.

In addition to the advantages in volume, low leakage current and low power factor normally associated with this style of capacitor, the WF also offers an acid-free construction and voltage ratings up to 300 VDC at 85°C and up to 200 VDC at 125°C where 125 VDC and 85 VDC were previously considered the upper limits. The WF is lighter in weight, too, thus offering even more advantage for aerospace applications.

CAEON SOLVENT #27

(Trichlorotrifluorethane)

A cleaning agent for removal of oil, grease, and dirt from objects without harm to metal, plastic, or elastomeric parts.

- NON-FLAMMABLE
- VIRTUALLY NON-TOXIC
- CHEMICALLY AND PHYSICALLY PURE
- CHEMICALLY AND THERMALLY INERT
- STABLE

SEE PRICE LIST ON THIS PAGE

The solvent exhibits a washing and penetrating action which aids its cleaning ability. High density and low surface tension enables Caeon #27 to wet the surface of most materials and wash away dirt and sludge.

The solvent is useful in ultrasonic and vapor degreasing equipment. Soils which are normally insoluable in any solvent can often be removed by this solvent with cavitation in ultrasonic units. Vapor rinsing is more easily accompilshed without exposing object to high temperatures.

The solvent is compatible with most organic systems. It will remove soils or contaminants and leave the surface 'Residue-Free'. All standard methods of using a solvent may be employed.

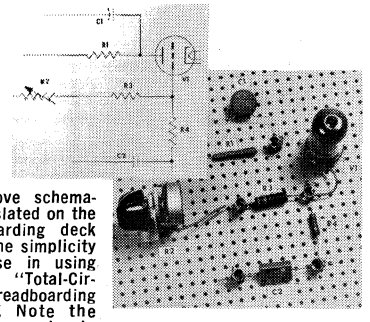
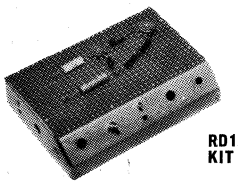
"Total-Circuit" BREADBOARDING



The above schematic translated on the breadboarding deck shows the simplicity and ease in using Aladin's "Total-Circuit" breadboarding system. Note the same approximate relationship between the schematic and the breadboarding deck.

The Breadboarding Kits, Punched Board and Accessories shown and described here provide a simplified means of developing circuits. The Breadboarding Deck or work area is the standard "A" Pattern punched board. The rugged aluminum Base has ¼", ⅜" and ½" holes for mounting of potentiometers, switches and etc. Feed through terminals part #B200A, Terminal Boards part #526, "L" brackets part #BR-2, "V" brackets part #463, "Z" brackets part #422, and assembly screws are items that are found in each Slanting Base Kit. Exact quantities are specified below. See accessory and punched board pages for more exacting details and specifications.

SLANTING BASE BREADBOARDING KITS



RD1XP KIT

RD1XP KIT measures 8½" long x 6⅛" wide x 2⅛" high and contains the following; A phenolic deck #32XX18, A metal base #RD1XP-B, A package of 25 terminals #B200A, A terminal board #526, 2 brackets #BR-2, 2 universal brackets #463, 6 universal brackets #422, and a package of screws for assembly of Kit and accessories, plus a plastic parts box.

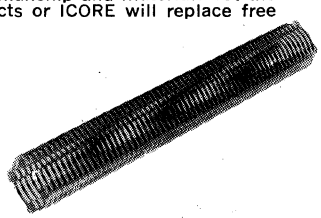
AIR WOUND COILS

ICORE Electro-Plastics offers a complete versatile series of air core inductors designed especially for RF transmission, or other equipment requiring high Q factors in the range from 100 to 500. Standard coils are available for prototype, production, or amateur use. These coils may be used for pi output circuits, conventional LC output circuits, interstage and oscillator circuits. All Air Dux coils are constructed of tinned copper wire wound on large low-loss polystyrene rods for the highest mechanical strength and lowest electrical losses.

AIR DUX is a trade name synonymous with quality. Workmanship and materials set the highest standards in the industry. Coils are free of defects or ICORE will replace free of charge.

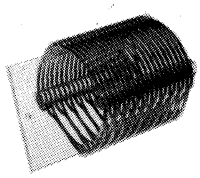
AIR DUX STICK COILS (T SERIES)

½" to 3" diameter tinned copper stick coils are stocked in various TPI (turns per inch), wire sizes and lengths. 4", 5" and 6" diameter coils, as well as silver plated coils, are available on special quotation.



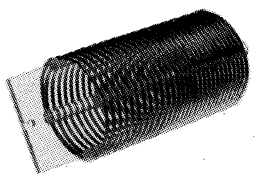
INDENTED PI DUX®

1" to 3" diameter precut coils with mounting plate are for direct use in pi networks. Each coil has an inductance of 18 micro henries. Alternate turns are indented for ease of tapping. Catalog numbers — 816A, 1014A, 1212A, 1411A, 1609A, 2007A, 2406A.



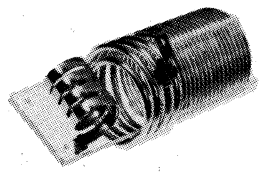
VARI-PITCH PI DUX

1" to 3" diameter precut coils are similar to indented pi dux except that each coil has two different pitches. The reduced inductance per turn of the wider pitch facilitates the tapping of low value inductances. The vari-pitch constructions give a higher Q due to space factor. Catalog numbers — 820D10, 1212D6, 1608D6, 2008D5, 2408D4.



195 SERIES PI DUX

The 500 and 1000 watt pi dux assemblies are compact yet conservatively rated. The high frequency coil sections are silver plated for high tank circuit efficiency. A complete technical sheet is included with each assembly. Catalog numbers — 195-1 (500 watt); 195-2 (1000 watt).

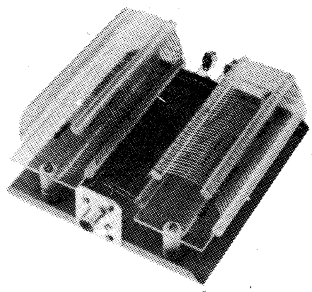


AIR DUX BALUN

Balun coils match impedance in both transmitters and receivers, without adjustment, from 10 through 80 meters. Also match 75 ohms unbalanced to 300 ohms, or 75 ohms balanced. Easily handle outputs from transmitters with power up to 750 watts if SWR is held low.

Cat. No. B2009—One balun coil (two required) with plastic mounting strips, insulator and hardware.

Cat. No. MB2009—Metal mounting plate with plastic terminal plate and hardware (less coax connector).



AIR DUX COIL CLIPS

Air dux coil clips permit convenient tapping of coils and rapid movement of tap from turn to turn, where soldering is undesirable. Because of large grasping area, clips will not slip. Special solder hole permits fast soldering of leads.

CUSTOM COILS

Air dux coils can be designed to specification for commercial, industrial, and military applications with special indenting, plating, mounting brackets, pre-attached leads. For quotations or applications assistance, submit specifications and requirements. Air dux - High Temperature use Lexan support rods and mounting plates, allowing for operation at temperatures up to 280°F (140°C) before distortion, with a Q factor comparable to coils wound on polystyrene rods. These coils are applicable to high temperature environments or where heat from surrounding equipment must be considered. Normal operating temperatures are: Polystyrene: Up to 180°F (80°C)
Lexan: Up to 280°F (140°C)

INDUCTOR LEAD MATERIAL

Standard All leads are 1 5/16" minimum length.

The leads of standard sizes cataloged, are 99.9% oxygen free copper. Before manufacturing, the coating is pure tin hot dipped to a minimum thickness of 0.0006 inch. After manufacturing into molded inductors the leads are hot dip coated with 60/40 tin-lead solder with a minimum thickness of 0.0006 inch.

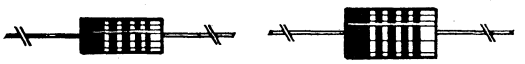
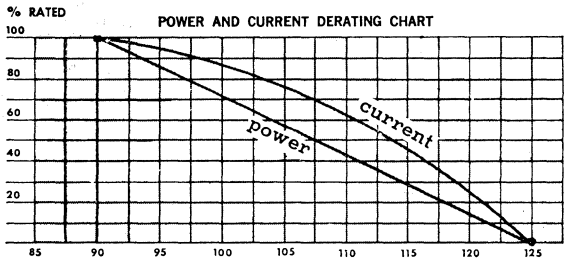
MIL-SPEC MOLDED CHOKES

MILLER MOLDED COILS CONFORM TO MIL-C-15305C



This group of molded chokes affords the design engineer a wide range of inductance values, current ratings, and sizes which will fulfill most normal design requirements. Manufactured under strict Quality Control supervision and tested in accordance with MIL Standard 105 the user is guaranteed uniformity and reliability in every coil. This series conforms to MIL-C-15305, Grade and Class 7.



Tabulated currents in milliamperes are maximum values based on a temperature rise not to exceed 35° C., nor wattage dissipation in excess of listed values.

MOLDED CHOKE COILS COLOR CODING

For cylindrical choke coils. Cylindrical choke coils shall be marked with five colored bands. A silver band MIL identifier of double the width of the other four bands, located near one end of the coil, identifies military radio-frequency coils; four other bands of equal width, three indicating the inductance in microhenries and the fourth band indicating the tolerance in percent. Color coding shall be in accordance with the color code of table. When either the first or second band of the three bands is gold, this band shall represent the decimal point for inductance values less than 10, and the other two bands shall represent significant figures. For inductance values of 10 or more, the first two bands shall represent significant figures, and the third band shall represent the multiplier. For small units, dots may be used instead of bands, when specified. The diameter of the MIL-identifier dot shall be larger than the other dots. The colors used shall be in accordance with MIL-STD-174. Typical color coding for units with inductance values less than 10 and for 10 or greater is shown on figure 1.

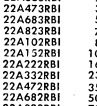
Shielded Subminiature Adjustable R.F. Coils



These compact adjustable coils offer a minimum two-to-one inductance range with relatively small changes in Q. The tuning adjustment is accessible from either the top or bottom of the coil assembly. Magnetic shielding is achieved through the use of cup cores while the metal shield offers effective electrostatic shielding. Printed circuit terminals on base and shield.

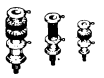
Ceramic Adjustable R.F. Coils



The forms used in this series feature terminal rings machined from the ceramic form material. Coils wound on these forms exhibit high Q and good stability. The adjusting core is held rigidly at any setting through the use of a newly designed tension device on the bushing.

Economy Adjustable R.F. Chokes

Through the use of a recently developed Nylon molding process we are able to offer an inexpensive line of adjustable chokes. They can be adjusted from either the top or bottom. This lends a degree of flexibility to your design. Mounting is achieved by means of a metal clip in a ⅛" hole.

Dimensions: ⅜" x 1⅜" long.

R.F. Chokes with Axial Leads

These chokes cover an inductance range from .1 microhenry to 10 millihenries in 5 decades with 8 coils per decade. Inductance values increase in steps of approximately 50%. Either single layer or 3-pi universal windings are used to insure low distributed capacity. Chokes are wound on low-loss molded phenolic or powdered iron core forms and are impregnated with a moisture- and fungus-resistant varnish. The type of powdered iron used allows the chokes to operate at all frequencies up into the ultra-high frequency region.

Dimensions: Phenolic form ⅜" diameter x ¾" long. Iron core form ⅜" diameter x ⅞" long. Leads are 1½" long.

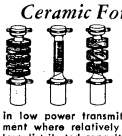
Ceramic Form R.F. Chokes



A series of high quality fixed coils wound on a silicone impregnated steatite form. The coils are the standoff type and are mounted by a single 6-32 screw. They find primary application in low power transmitters and associated equipment where relatively high current capacity and low distributed capacitance are important.

F.M. Stereo Multiplex Inductors

Basically the system involves pick-up of sound by two microphones, the left (L) and right (R). Subsequently the two audio signals are combined in such a way that L plus R frequency modulates an F-M carrier in the conventional way while L minus R amplitude modulates a 38KC stereophonic subcarrier, and the resulting double side-band AM signal (23-53KC) with suppressed carrier, likewise frequency modulates the FM carrier. A 19KC pilot sub-carrier signal also frequency modulates the FM carrier and at the receiver provides a means of controlling the frequency and phase of the 38 KC carrier for re-insertion. When broadcasting Stereo Multiplex the region of 53 to 75KC is allotted to the station for SCA signals.

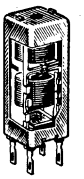
Communications I.F. Transformers



Designed for experimental use in communications equipment where selectivity and stability are important. The 100 kc. I.F. transformer and BFO coil are intended for tube application, while the 455 kc. crystal filter I.F. transformers have taps on the winding to allow for use with both tubes and transistors. The 1800 kc. I.F. transformer offers the best possible "Q" with stability to give a degree of selectivity that compares with lower frequency I.F. transformers. This transformer is for use with tubes only. Part number 1770 is a double tunel I.F. transformer having taps on both Primary and Secondary winding.

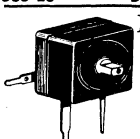
Micro Miniature F.M. Variable Capacitor



A companion variable capacitor to our part No. 2108 ceramic variable. The ceramic material has a temperature coefficient of —120 parts per million per degree C over the range—20 to +70°C. The use of silvered ceramic rotor and stator assemblies results in a capacitor that is completely free of microphonics. This is very important in the design of small F.M. receivers that are subject to shock and vibration. **Size .51" sq. x .39" deep**

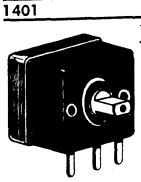
Micro Miniature B.C. Variable Capacitor



To our knowledge this unit represents the smallest two section Broadcast Band variable capacitor generally available. The capacitor is manufactured by evaporating silver on the ceramic plates, which are lapped to insure perfect mechanical register. This construction assures against shock and vibration with a complete absence of microphonics. **Dimensions .60" sq. by .43" deep**

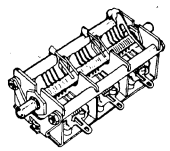
Precision Variable Capacitors



The capacitors we list in this group represent the highest standards that can be achieved in a commercial product. The rotor shaft revolves in a ball race at both front and back, with the torque controlled very closely. Each section has its own wipers grounded to the frame to assure that the rotor does not present ground loops. The stator in each section is supported on four ceramic pillars to assure excellent mechanical stability as well as insulation resistance better than 1000 megohms. The complete mechanical assembly is silver plated to keep R.F. losses to a minimum.

SANGAMO ELECTRIC COMPANY

inductors

ELECTRONIC COMPONENTS

Toroidal Inductors

Sangamo toroidal inductors are designed and manufactured to meet the highest standards of quality and reliability with maximum attention to user convenience. The use of powdered molybdenum permalloy cores assures inductors with a high Q factor and exceptional stability of inductance. Types ET and LT encapsulated toroids, specifically designed for printed circuit board mounting, feature a unique coil protection scheme and construction that is virtually impervious to moisture. Types WT (wax-impregnated) and NT (unimpregnated) units display the same electrical qualities.

ENCAPSULATED UNITS

Terminals—The terminals are soft brass with a hot solder finish and are made on automatic screw machines to a special design which minimizes moisture creepage. The terminal length beyond the mounting surface is 0.13" minimum. The 0.04" diameter permits use in printed circuit boards with or without eyelets. The terminal ends are rounded to simplify assembly.

Inserts—The inserts are also made on automatic screw machines to a design which minimizes moisture creepage and provides a convenient and rigid means of mounting the inductors.

Header and Terminal Assembly—The terminals and the insert are hot molded into the header, an important feature in making the unit moisture resistant.

Encapsulation—The coil is rigidly held and protected from shock or vibration damage by a specially selected epoxy encapsulating compound. Vacuum encapsulation assures a void-free envelope around the coil.

Mounting—All units are designed so the terminal area is elevated from the mounting surface. This permits easy flux removal and prevents moisture accumulation.

WAX-IMPREGNATED UNITS

Sangamo Type WT inductors are available in all standard core sizes described in bulletin 2721A. The electrical characteristics of these units are identical to those of corresponding Sangamo Type ET encapsulated inductors. Units can be supplied on special order without wax-impregnation. These are designated Type NT inductors.

Impregnation: All standard units are impregnated in a high quality, electrical grade, micro-crystalline wax which provides effective protection against moisture.

Leads: In accordance with MIL-W-16878, leads are stranded tinned copper lead wire with Type B insulation. Minimum length is 6 inches.

MAXIMUM OPERATING TEMPERATURE:

105°C for encapsulated units
65°C for wax-impregnated units.

MILITARY APPLICATIONS

Sangamo inductors meet or exceed all requirements of military specification MIL-T-27B for grade 5, Class R and life expectancy X.

RATIO DRIVES

for FINE INSTRUMENT AND MACHINE CONTROLS

Ball Bearing Type **Compact, durable, exceptionally smooth action**

These unique ratio drives employ precision ball bearings. Used for rotary control of components in instruments, they provide unexcelled smooth motion. Ruggedly built, permanently sealed and lubricated, JAN Ratio Drives accommodate applications where miniaturization is essential.

Input and output shafts of these units operate in the SAME DIRECTION. Types "RDL" and "RDS" provide "in-line" input-output shafts. Type "RDLC" is supplied with **concentric** shafts whereby the output envelopes the input shaft. An added feature of type RDLCC is the output shaft in the rear.

RIGHT ANGLE RATIO DRIVES

Versatile, miniaturized, right angle rotary controls.

Featuring dual output stainless steel shafts at right angles to input, these engineered drives provide an ideal type of instrument control. Available with matched bevel or worm gears covering a wide range of ratios.

JAN'S RIGHT ANGLE DRIVES are especially useful for handling spring or gravity-loaded components since the output shaft automatically locks in any desired position yet remains free for smooth adjustment by the input shaft. Assembled in dust-proof housings, the gears are permanently pinned in place on stainless-steel shafts mounted in oilite bearings and held under constant pressure.

JAN'S MAGNETIC SHIELDS are made of Mu-Metal and are hydrogen annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN'S MAGNETIC SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields.

In addition, the use of these shields protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN'S standard bezels as listed below. See following pages for specifications on JAN'S BEZEL ASSEMBLIES.

SAFETY KNOBS

NEW!

"PRESS-TO-TURN" KNOBS.

Knobs spin freely... and **MUST BE PRESSED-IN** while making changes.

SLIP-CLUTCH

With Fixed or Retractable Spinners

Cat. Nos. K-1375 & K-1376 (For ¼" shafts)

Designed for driving devices such as variable capacitors, inductors, potentiometers, etc., these knobs are based upon the principle of the "slip-clutch";* automatically disengaging and slipping when a pre-determined torque has been exceeded. JAN'S SLIP-CLUTCH SAFETY KNOBS are fluted to aid in sensitive adjustments and are equipped with either a fixed or retractable spinner for fast turning. Insert-molded-to-Bakelite construction provide durable, backlash-free units to safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops.

**Normally set for 2½ - 5" lbs. Can be modified for other requirements.*

Model No. K-1376 is identical with No. K-1375 but has the additional feature of a retractable spinner. Spring loading provides positive, toggle-type action to lock spinner in either open or closed position. Model No. K-1376 is designed for use where economy of space is essential.

RCA CITIZENS' BAND RADIO

THE RCA MARK 10 ALL TRANSISTOR CB 2-WAY RADIO

The RCA MARK 10 is the latest in a long line of quality 2-way radios from RCA. Fully transistorized, the MARK 10 draws only a fraction of the current required to power tube units making it particularly useful for installation in automobiles and other vehicles. Because the MARK 10 uses all silicon transistors, dependable performance is assured at operating temperatures ranging from −23 degrees to +130 degrees F.

Among a host of operating features, the versatile RCA MARK 10 has provision for public address use with a PA switch on the front panel and an external speaker jack which de-activates the internal speaker. The MARK 10 may be connected to a standard 12-volt DC power source with either positive or negative ground. A separate, voltage-regulated matching AC power supply with auxiliary speaker is available for connection to a 120-volt AC, 60 cycle power source.

new! BANTAM JACK PANELS

Bantam Jack Panels are designed to satisfy the increasing demand for more compact patchfields in modern electronic and communication equipment. Bantam Jack Panels, with miniaturized jacks, provide twice the number of jacks in a standard size panel. They require only ½ the rack space previously used by conventional panels. The new panel assemblies weigh 65% less when compared to an assembly using an equivalent number of jacks in a conventional jack panel. ■ Bantam Jack Panels are compact, lightweight, and yet provide the same dependable service as the long established telephone types. This new design offers 96 jacks (48 pairs) in a 1¾ inch x 19 inch standard sized panel. The jacks on this panel are spaced to prevent the cross patching of adjacent circuits when using double plugs.

BANTAM JACK PANEL SPECIFICATIONS

Panel: Aluminum alloy, extruded. 1¾ inches wide for standard 19 inch rack mounting.

Jack Mounting: Four molded plastic inserts, each provides for 24 jacks. Pairs of jacks on ⅝ inch centers. Double row panel provides 96 jacks total. Blank inserts can be furnished where only single row of jacks is required.

Panel mounting: Mounting brackets are integral part of panel.

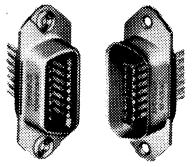
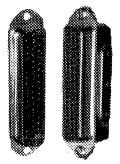
BLUE Ribbon® CONNECTORS

The Amphenol gold-plated ribbon connector provides more contact mating surface than any connector of its type. Applying the principle of the wedge, ribbon contacts exert a continuous flexing action against each other while mated, providing unusually low contact resistance. The Blue Ribbon® contact is self-wiping for reliability throughout its long life, and is available with 8 to 32 contacts. Cable to panel versions are also available.



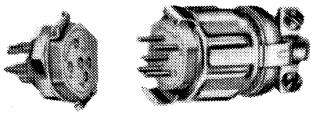
Micro RIBBON® CONNECTORS

Amphenol's Micro Ribbon® connector is a miniature version of the Blue Ribbon. It features 14 to 50 contacts, low contact resistance, self-wiping action and miniature size.



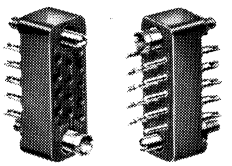
Min Rac 17 CONNECTORS

Amphenol's Min-Rac 17® connector is highly suited for saving needed space for proper ventilation, component mounting, or chassis size reduction. Mounting depth is less than most "shell-less" rack-and-panel connectors. It provides up to 50 Poke-Home® terminals in half the insert space required for standard rack-and-panel connectors. Poke-Home contacts are available in either crimp or solder versions.



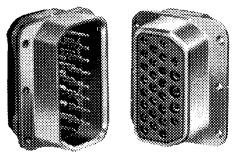
HEX-TYPE CONNECTORS

Amphenol provides a complete family of miniature rack-and-panel and cable-to-chassis connectors for interconnection in a wide range of applications. Hardware and contacts are interchangeable. Bodies are molded of diallylphthalate; gold-over-silver contacts will not tarnish or corrode and can be soldered without pre-tinning even after long storage. All hardware is nickle-plated solid brass.



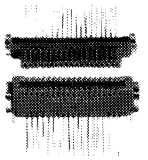
126 SERIES CONNECTORS

The 126 Series is a versatile group of connectors available in 11, 15, and 20 contacts —with or without protective can and cable clamp. Rated at 900 volts RMS, 60 CPS at sea level. Bodies are mica-filled phenolic; contacts are gold-plated.



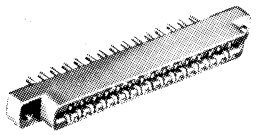
94 SERIES POKE-HOME® CONNECTORS

Amphenol's 94 Series rack-and-panel connectors feature Poke-Home contacts. Aluminum shells are cadmium plate, chromate treated. Useful for any rack-and-panel application, the 94 Series is especially valuable where circuits must be changed frequently within the connector. Poke-Home contacts can be wired and then inserted into the mounted or unmounted connectors in any desired position.



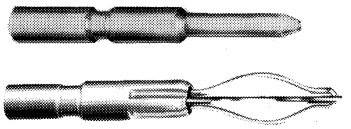
MICRO-MINIATURE CONNECTORS

Amphenol provides three additional complete series of subminiature connectors designed for modules, stick-circuitry, thin style printed circuit boards, and other micro-miniature applications. Use of the Micro-Mod®, Micro-Min® Series, and Micro-Edge® connectors is limited only by the imagination of the design engineer.



PRINTED CIRCUIT CONNECTORS

Amphenol's printed circuit connectors are available with ribbon or tuning fork contacts. The broad selection of contact tails represents the most complete line in the industry.



POKE-HOME® CRIMP MICRO-MINIATURE CONNECTORS

Amphenol micro-miniature connectors are now available with a choice of high-density contacts: Wire-Form for economically solving virtually every contact application or new Relia-Tac for extra high reliability. Both feature handy crimp termination on the following connectors:

Mighty-Mite®—cable-to-panel and cable-to-cable application; 7 to 61 contacts.
Tiny Tim®—module and rack-and-panel application; 5 to 33 contacts.
Micro-Rac®—rack-and-panel, cable, and module application; 52 to 104 contacts.
The 221 Series Strip—permits cutting and stacking in unlimited shapes.

MS CONNECTORS

Amphenol builds MS connectors to the latest issue of MIL-C-5015 Specification. They are designed, manufactured, and approved under this specification for the armed forces, and are ideal for commercial and industrial applications which require the same versatility and dependability.

MS — E CONNECTORS

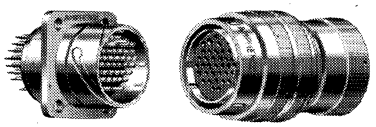
Amphenol's resilient dielectric MS connector meets all environmental requirements of the latest revision of MIL-C-5015. Its unitized grommet eliminates the use of bulky cable clamps, and results in a considerable reduction of length and weight in relation to standard MS connectors.

MS — R & 69 POKE-HOME® CONNECTORS

Amphenol Poke "R" solderless connectors provide all the lightweight environmental-resistant features of MIL-C-5015s "R" Class with two important additions: Poke-Home contacts and superior environmental performance. Incorporation of these two features make Poke "R" a highly preferred MIL-C-5015-type connector.

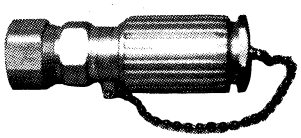
48 SERIES — MIL-C-26500 MIL-C-3830 (USAF)

Meeting or exceeding all MIL-C-26500 and MIL-C-38300 requirements, Amphenol's 48 Series combines miniature environmentally-resistant construction and Poke-Home crimp type contacts. MIL-C-26500 connectors perform with utmost reliability in temperatures of −55° C to +260° C, with no re-rating up to 360,000 ft. Available with threaded and bayonet coupling.



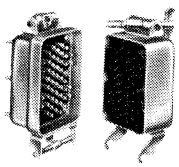
67 SERIES MINNIE® CONNECTORS

Amphenol 67 Series MinniE connectors are quick-disconnect, multi-contact, miniature bayonet types. MinniE connectors feature inclined stainless steel slots and spring loaded coupling rings. A bright orange visual indicator signals full coupling. The 67 Series has a wide variety of shell styles with environmental capability. Receptacles are available in hermetics.



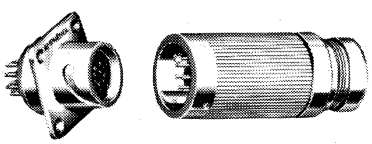
89 SERIES CONNECTORS

Rugged and completely leakproof, Amphenol 89 Series connectors provide efficient and dependable service even when entirely submerged in mud, ice, water, or mire. They are used extensively in missile ground-and-support systems, radar antenna installations, oil well and digging equipment, and other hard-service applications. Available in more than 70 insert configurations with 2 to 52 contacts.



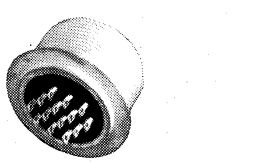
115 SERIES CONNECTORS

Amphenol 115 Series connectors accommodate 50 or 100 No. 16 contacts and are nominally rated at 750 volts RMS, 60 CPS at sea level. They provide maximum space efficiency for all applications where a large number of circuits must be broken quickly and conveniently. The vise-action of the screw lock permits a quick-make quick-break switching action of all contacts.



MINIATURE "AN" CONNECTORS

Compact, efficient Amphenol 165 Series connectors are miniature versions of standard AN/MS types. Because of their weight and space saving design they are widely used in aircraft and miniaturized electronic equipment. 165 Series connectors use bayonet couplings, and are both pressure-proof and completely waterproof—mated or apart. Hermetically sealed, 182 Series connectors mate with connectors of the 165 Series.



172 SERIES HERMETIC CONNECTORS

Amphenol 172 Series hermetic receptacles use an improved hard-glass compression seal with high visibility "Identoseal" contact identification. Both insert faces have ceramic white marking permanently fused to the dark brown glass. Receptacles mate with MIL-C-5015 MS plugs. The 172 Series is available in round flange, square flange, hex flange, and flangeless shells.

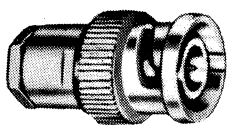
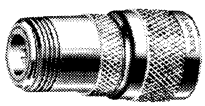
83 SERIES UHF CONNECTORS

Amphenol's UHF 83 Series consists of both small and large single and twin contact connectors. All are low-cost, general purpose connectors of non-constant impedance. They operate satisfactorily at frequencies up to 200 megacycles, can be used with caution up to 500 megacycles, and can be used at peak voltages up to 500 volts.



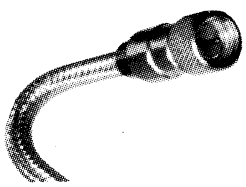
MIL-CRIMP, QUICK-CRIMP & SOLDER BNC CONNECTORS

Amphenol Series BNC connectors for small coaxial cables consist of non-constant impedance types and an improved constant 50 ohm impedance type. All incorporate quick-connect and disconnect bayonet-lock coupling and are weatherproof. Now you can have your MIL-spec and crimp it, too — with the first quick-crimp connector to meet MIL-C-23329A, Amphenol's MIL-Crimp.



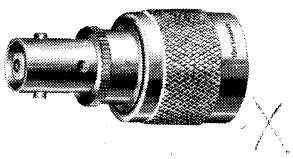
SERIES N CONNECTORS

Completely weatherproof Series N connectors are the most popular constant impedance connectors for medium size coaxial cables. They can be used throughout microwave frequencies with minimum line unbalance or increase in standing-wave ratio. Although Series N 50 ohm and 70 ohm connectors do not mate, 70 ohm cables may be used with 50 ohm Series N connectors where impedance matching is not critical.



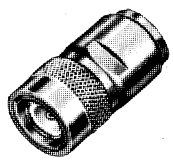
SUB*Minax*® RF CONNECTORS

Amphenol's SubMinax RF connector family provides the most complete subminiature line available from one source. The SubMinax 27 Series is gold-plated and uses a MIL-C-22557 screw-on and push-on coupling. The SubMinax 5116 is silver-plated and mates with competitive non-MIL-C-22557 screw-on, push-on coupling types. The 5116 contains only five components, saving as much as two-thirds assembly time.



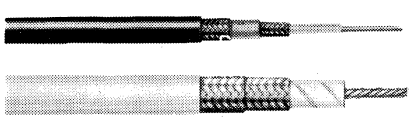
BETWEEN SERIES ADAPTERS

Amphenol can provide the most complete line available of between-series adapters.



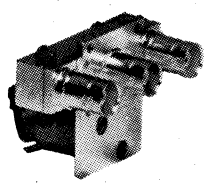
OTHER RF CONNECTORS

Types C, HN, LC, BN, TNC, LN, SKL, MB, MC, SM, TWINAX, MHV, and Terminations, as well as a variety of modifications, make up the complete Amphenol line.



COAXIAL CABLE

Amphenol provides the broadest line of RG and non-RG coaxial cable available, and is generally accepted as the quality leader in this field. Dielectric includes Teflon, Polyethylene, and Polyfoam.



COAXIAL SWITCHES

Amphenol coaxial switches provide remote and manual switching up through 4000 mc. Single pole, single throw–through 12 pole. Available with a variety of terminating connectors and relay voltages.

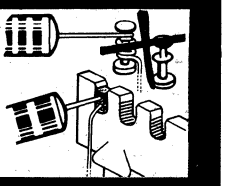
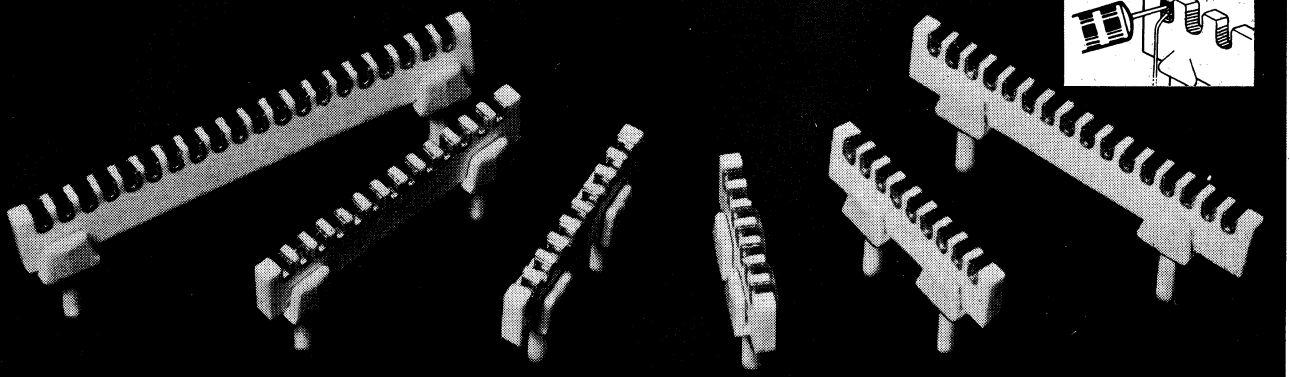
CERAMIC TERMINAL STRIPS

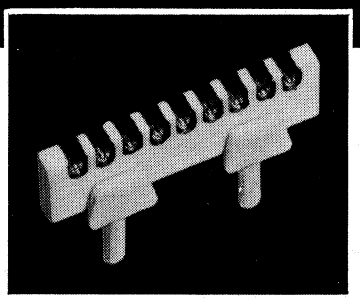
Simplify Component Replacement!





PERMANENT BOND BETWEEN METAL AND CERAMIC

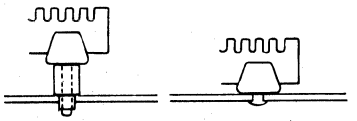
Not just an adhesion, but "fired" to prevent metal from loosening



SOLDERED 500 TIMES
STILL LOOKS LIKE NEW

ALCOSTRIPS are especially suitable for experimental design where components need to be resoldered and removed. The unretouched photo tells the story — that **ALCOSTRIPS** can be used again and again. One experimental engineer soldered over 500 times on this unit — cleaned it, and has continued using it.

MOUNTING SUGGESTIONS



ELEVATED **FLUSH***
*Cut and fuse

MINIATURE SIZED — Electronic engineers who insist on high standards in manufactured products have found these new ceramic strips an answer to their "quality" problems. The uniform manufacturing of the terminal strips gives the row after row assembly a neater appearance and adds a quality look overall. Tinned copperplate on silvered ceramic facilitates soldering of components and leads. **ALCOSTRIPS** are superior to the commonly used temperature afflicted plastics. The high temperature qualifications allow these ceramic strips to withstand excess heat. Ideal for long life, low resistance. Recommended for prototypes and production uses.

TRANSISTOR HEAT SINKS & RETAINERS
TRANSMITTING SOCKETS & ADAPTER PLUGS

TRANSISTOR HEAT SINKS

Immediate Delivery from Stock

The standard "off the shelf" line of beryllia heat sinks are available in JEDEC-TO Numbers: 3, 5, 8, 9, 11, 12, 16, 18, 33, 38, 39, etc. Standard thickness 1/16". Also available in 1/32" thickness.

TRANSISTOR HEAT SINKS

Beryllium oxide is unique among inorganic materials in that it combines the characteristic pure oxide electrical properties of high resistivity and low dielectric loss with a thermal conductivity equal to aluminum metal. Where electronic applications require both dielectric insulatiion and high heat transfer from device to chassis, only Beryllium Oxide (BeO) can provide a satisfactory solution to the design engineers problems. Beryllium oxide, a high purity sintered BeO was developed to answer this problem. Its excellent physical and electrical properties are contained in the charts which follow.

BERRYLLIUM OXIDE HEAT SINKS GIVE YOU THESE ADVANTAGES

- **Increased transistor life and output**
- **Freedom from outgassing**
- **Extremely resistant to shocks, vibratioin and moisture**
- **Infinite shelf life**

BERYLLIUM OXIDE TRANSISTOR RETAINERS for HEAT DISSIPATION AND ELECTRICAL INSULATION

TRANSISTOR RETAINERS

Optimum thermal conductivity, with absolute electrical insulation reliability, are offered by spring clip transistor retainers. The retainers provide electrical isolation for the semiconductor by means of a disc of beryllium oxide ceramic brazed to the base of the beryllium copper retainer. Solid ceramic disc, in contrast to a thin insulating coating, is practically immune to loss of insulating value through cracking, abrasion, chipping or other results of rough treatment in assembly. Heat transfer from the semiconductor to chassis or heat sink is not sacrificed since the high-purity (BeO) has thermal conductivity equal to that of aluminum metal.

Maximum soldering temperature — 300°C.

Barrier Terminal Blocks

The new 500 series Jones Barrier Terminal Blocks are designed for applications where electrical and mechanical performance requirements are especially critical. Bottoms are closed so that insulating strips are not required. Knockouts are molded into the base so that Y terminals can be accommodated if desired. The heavy construction adds strength to the block, minimizing warpage and shrinkage. A top-mounted marker strip can be furnished.

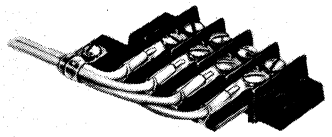
Barrier Block Fanning Strips



Fanning strips serve as a convenient means for rapidly making and removing connections from barrier terminal blocks. They facilitate cable or harness wiring and minimize the possibility of subsequent wiring errors. Both straight and angle type fanning strips are available. Terminals are made of .032" brass, cadmium-plated. The 3/32" thick, ½" wide XP black phenolic mounts are furnished with a hole, in either the right or left side, for securing the cable with lacing twine. For larger sizes, use of a cable clamp is recommended.

Marker Strips

Marker strips are used for the purpose of labelling terminal positions on barrier terminal blocks and insulating exposed portions of terminals from metallic mounting surface. Marker strip mounting holes correspond with those on appropriate barrier terminal block. Made of 1/32" vulcanized fibre and numbered sequentially from 1 with legible white numerals. Part number indicates number of terminal positions accommodated.

"500" series marker strips are made of 1/16" XP Bakelite, ¼" wide and numbered sequentially from 1 with ⅛" legible white numerals. Mounted on top of terminal strip as illustrated, with mounting screws furnished.

"Y" TYPE AVAILABLE AT SLIGHT EXTRA COST

"Jones" Type Plugs, Sockets

300 SERIES CONNECTORS are from the famous line of "Jones" plugs and sockets which have been a standard of the electrical and electronic industry for over a generation. For medium duty applications, they are small in size with good separation between contacts.

Molded bakelite insulator has 2 to 33 cadmium-plated phosphor-bronze contacts, for cap or panel mounting. All plugs and sockets are polarized so that plugs of one size cannot fit into sockets of another size. "Knife-switch" type socket contacts engage both sides of flat plug contacts, providing double contact area. Rated Voltage...730 Volts rms. Contact Resistance....016 Ohms max. Rated Current...10A max.

In accordance with UL Standard #498, (all contacts carrying "rated" current simultaneously) as follows: Current (2-12 contacts).....7.5 amperes Wattage (2-12 contacts).....1875 watts
(15-33 contacts).....4.5 amperes (15-33 contacts).....1125 watts

400 SERIES plugs and sockets are rated for duty beyond the range of the 300 series. Maximum rating is 1200 volts r.m.s. at 15 amperes. Average contact resistance is .001 ohms.

2, 4, 6, 8, 10 and 12 contact sizes are available, each size being polarized and suitable for either cap or panel mounting. "Knife-switch" type socket contacts are made of cadmium-plated phosphor bronze. These contacts engage both sides of the flat plug contacts, providing double the contact area.

Plug prongs are made of cadmium-plated brass ¼" wide by 1/16" thick. Caps are finished in black wrinkle and equipped with fibre lining.

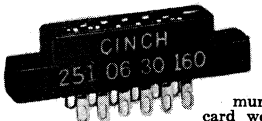
High density edge connectors with .050″ centers for use with double-sided .062″ printed circuit boards. Conventional wiring tails. Insulator is diallyl phthalate, type SDG-F per MIL-M-14. Contacts are phosphor bronze with .00003″ gold plate. Carbon steel mounting for use in semi-flush printed circuit mounting, and cellulose acetate polarizing key available as separate items.

BIFURCATED CONTACT EDGE CONNECTORS



Designed for minimum printed circuit card wear, low insertion force and positive contact with printed circuit board. Insulation is glass-filled diallyl phthalate, type SDG-F per MIL-M-14. Contacts are of phosphor bronze with .00003″ minimum gold plated. Types 250, 251 and 252 utilize bifurcated contacts, permitting two flexing surfaces instead of one for positive contact.

Bifurcated contacts are especially recommended for added contact reliability where vibration or printed circuit board irregularities would otherwise cause trouble. Connectors meet requirements of MIL-C-21097A (Ships) where applicable. One plastic polarizing key furnished unassembled. Rating: 830 v. AC rms.

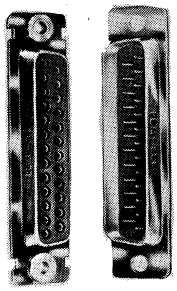
Cinch Jones Connectors

"D" SUBMINIATURE CONNECTORS



CINCH D Subminiature Connectors are designed for applications where space and weight are prime considerations. These high contact density connectors are especially well-suited for aircraft, missile and ground support installations. Although designed essentially for rack-and-panel installations, D series connectors may be adapted for cable attachment by means of accessory junction shells with integral clamps.

The original D series has two-piece nylon insulators and solder pot contact termination.

All D Subminiature connectors will inter-mate if insert arrangements correspond. These connectors are designed to meet or exceed most of the requirements of MIL-C-8384 Rev. B. Cinch current rating is 5 amps; military current rating is approximately 1.5 amp.

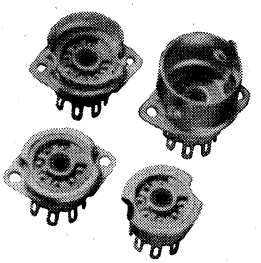
ELCO SOCKETS

Commercial and MIL Types E-Z MATE* SOCKETS
(Patented)
7-Pin and 9-Pin Miniature Models



CONFORMING TO MIL-S-12883-A, our exclusive, patented E-Z MATE* design will be found in all our 7-Pin and 9-Pin Base-Shield and Saddle Type Sockets (except Ceramic). This ingenious design provides a positioning-key at the top of the socket which permits the tube to "find" its correct insertion point without loss of time or pin damage. And by virtue of the E-Z MATE* feature, tube locations may now be designed into "blind" or formerly inaccessible positions.

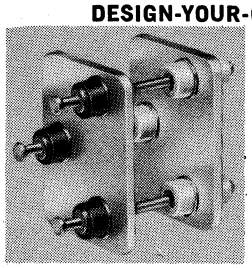
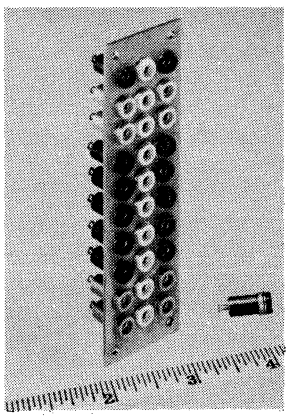
EMC Test Jacks are designed to offer the most rugged construction and dependable performance, combined with minimum size for the most sophisticated electronic applications. Samples are available upon request. Please indicate your basic requirements.

DESIGN-YOUR-OWN CONNECTORS



Male/female custom connectors may be fabricated "on-the-job" through the use of Nurl-Loc Probes and Jacks, to fulfill any immediate or specialized requirements. Merely drill or stamp holes and add Probes and jacks as required. While not a stock item, EMC can furnish preassembled connectors to your specifications on special order.



TEST/PATCH PANELS

Metal panels of desired size and shape may be drilled or stamped to specification with .250" mounting holes. Nurl-Loc closed entry test jacks are pressed in for fast installation. With connectors or test panels, an infinite combination of layouts is possible, with up to 10 colors of jacks for coding.

The finest grade laminated phenolic sheets we use in our production fabrication are available to you in a range of standard sizes or special sizes cut to order; and in a variety of types.

NEMA GRADE XXXP-MIL-P-3115C, paper base electrical-color natural. Most commonly used for panels and terminal boards. Excellent electrical grade and dimensional stability. Max. operating temp. continuous 250 deg. F.

NEMA GRADE G-10, MIL-P-18177B-GEE, color green **GLASS CLOTH EPOXY.** Superior chemical resistance, excellent mechanical and electrical properties. Max. operating temp. continuous 300 deg. F.

COPPER CLAD LAMINATES, XXXP MIL-P-13949 TYPE PP and **GLASS EPOXY MIL-P-13949B TYPE FL-GE,** are used mainly for printed circuitry. The copper foil serves as the conductor and the laminate provides the insulating support. 2-ounce copper foil is laminated to one or both sides of the insulator. **We catalog both types in XXXP and G-10.**

FIBERGLASS REINFORCED POLYESTER NEMA GRADE GPO-1 with a class 155C (300°F) rating. Color is Tan. Excellent mechanical and electrical properties. Fabricates similar to Phenolic and can be punched cold.

MICRO-GATOR CLIP

(Smallest Insulated Clip Ever Made)

U.S. Patent No. 2,762,028 Trademark Reg.

Micro-Gator

Micro-Gator with Insulator

The alligator clip with the microscopic tip! This is the alligator clip you now can use where no other clip will do . . . on printed circuits, in tight spots and on tiny terminals too crowded for anything but its microscopic tip. Including separate skin-tight insulator the tip is no bigger than the head of a pin! Yet the Micro-gator has ample thumb grip, and plenty of bite to stand up straight on the smallest terminals. Ample 7/32" jaw spread. 1 3/32" long. Solder connection. Skin-tight flexible vinyl insulator (sold separately) has "lip-action" tip slot so that jaws stay covered whether open or closed.

Type No. 905 Solderless Terminal Blocks are specially designed for applications where space and weight conservation are important factors. Because they are molded of flexible polyvinylchloride material they may be bent in any direction to fit contours and sharp angles. Typical applications for these terminal blocks include missile guidance systems, computers, aircraft communications, underwater detecting equipment, etc.

The shortest distance between the live parts of Type No. 905 Terminal Block is 3/8". Its brass terminals will accommodate a #10 wire as a maximum. The polyester material of which the blocks are made is rated at max. of 30 amps, 380 volts, or 440 volts if mounted on insulated surface. Maximum heat capacity: 60° C. Insert conductor in block and tighten the set screw.

Flexible Terminal Block No. 905 measures 3-3/4" long, 5/8" wide, 1/2" high and 11/32" between terminal centers. It may be cut to smaller sizes as required.
